DRAGON WATCH EDITORIAL

As always I offer you a warm welcome to the farewell issue of Dragon Watch. For those of you who do not know this is the last ever issue of Dragon Watch to be produced, I sincerely hope you have enjoyed reading the magazines. However many you have had the chance to have read. For any readers who are seeing this magazine for the first time this is the potted history of the magazine.

Dragon Watch was first printed by myself in 1996 after I had offered to produce a magazine for a new organisation at that time, the Welsh Federation of Independent Ufologists (referred to as the WFIU in later instances). I had had articles printed elsewhere but this was the first time that I had produced a magazine off my own back so it was quite an undertaking.

There were two issues produced in 1996. These issues covered all different angles of Ufology and they were based on the following policies (as were the following four for 1997):

1. All subjects should be covered, there are many different angles to Ufology should be presented. This also stretched to subjects that are considered outrageous or maverick. These articles may be a load of rubbish and impossible to digest for some people but they should at least get the chance to read about them.

2. All the articles should give you something to think about, whether you agree with them or not. Even if there are different opinions out there the least the

article should be interesting and hopefully thought provoking.

3. All the articles should not just be understood by Ufology experts! This magazine is for all levels of interested Ufologists, the articles should be understood by everyone, they should also be interesting, varied and easy to comprehend for all readers.

4. The magazine should always be value for money, the article has always been 32 pages with very little in the way of pictures. This in my view does not dilute the contents of the writing, which is the the most important part of the magazine. I am not a big fan of huge pictures all over the place as it takes up a lot of space and cuts down the space for the written articles, where pictures have been presented it is because it compliments the articles.

5. The articles in Dragon Watch should be original articles. There have been items that have been presented elsewhere but they have been included because they really can not be bettered or are interesting articles in themselves.

6. One aim was to try new aspects of the magazine, this I did when I had tapes for the blind produced. Although there was no initial success I still have the tapes and hope to do something with them using the Blind Institute. I would be interested to know if any other UFO magazines have tried this road before and if they ever will.

7. It was my aim to work together with groups to produce the

magazine on a friendly basis. There were to be no rivalries and if I used any one elses articles they would be free to use any of mine.

8. One of the most important aims was that while the magazine represented the WFIU, contributions or opinions from over the border or overseas would not be excluded. Ufology is such a big subject that it needs everyone to take part. These are the words that I wrote in the first editorial:

'THERE WILL AND SHALL BE NO BIAS. While the WFIU may have the word Welsh predominate in it there should be no borders in Ufology.'

While on this subject I feel that I have achieved this having printed articles from English, Scottish, American, New Zealand and French contributors.

The aims and policies that I mention above I feel have been adhered to, I hope others feel the same way.

After producing the first two issues in 1996 I decided to continue to produce the magazine in 1997, with four issues but as an independent magazine. The presentation changed and there were improvements as well as articles from further a field. Although continuing to to adhere to the aims stated above.

On a personal note, producing Dragon Watch has taught me a lot on all aspects of Ufology, writing, editing, business sense and generally the whole package of producing the magazine.

ROLL OF HONOUR.

My thanks go to the following people who have contributed to Dragon Watch in any of the six issues. I would also like to thank everyone who has offered opinions and offered help for any of the issues, especially Matthew Williams for all his thoughts and technical help, Dr Robert Sexton whose constructive criticism I rate very highly and also Margaret Fry who gave me the chance to produce the magazine as part of the WFIU's plans in the first year. Not forgetting those who actually subscribed to the magazine.

THE CONTRIBUTORS AND THEIR WORKS.

Matthew Williams. (Truth seekers Review).

Meet the groups (Issue 1).

And for all his help on all aspects of the magazine.

Eric Morris (BUFOSC).

Meet the groups (Issue 1).

Colin Ridyard (WFIU member).

Anglesey sightings (Issue 4).

Parliamentary questions (Issue 4).

Gordon Millington (Pegasus Magazine and SIGAP).

Meet the groups (Issue 1).

The Zecharia Sitchin view (Issue 1).

Abduction, A worrying new trend of abduction cases (Issue 2).

UFOs and humanity (Issue 4).

And for sending me the SIGAP pen!

Sheila Franklin (American Ufologist)

Historical flashback cutting (Issue 2).

Jason Chapman (The UFO Investigation Bureau).

Meet the groups (Issue 1).

Area 51, The facts and the fiction (Issue 1).

Matthew Hurley (Phenomena)

The Billy Meier case (Issue 1).

Viv Alexander and Ron Halliday (Phenomenal News magazine).

Meet the groups (Issue 2).

Mia Adams (The Excyles book).

Meet the groups (Issue 2).

Roger Hill (Planetary Aid Network),

Meet the groups (Issue 2).

Michael Orton. (WFIU member).

Wylfa update (Issue 2).

The evidence for UFOs (Issue 2).

Internet pages (Issue 2).

Tony James (EMUFORA)

Area 51 dispute (Issue 2).

Gareth Price (WFIU member).

Helped design the Junior Members page (Issue 2).

Terry Hartman (Psi-Creative International).

Meet the groups (Issue 3).

Inter-dimensional shifts (issue 5).

Margaret Fry (WFIU).

Introduction to the WFIU (Issue 1).

Tom and Kerry Blower.

Meet the groups (Issue 1).

Adam Whaley. (West Wales Weirdos).

Meet the groups (Issue 1).

Malcolm Robinson (SPI).

Meet the groups (Issue 3).

Book reviews (issue 3,4,5,6).

Left at East Gate review (Issue 4).

Hypnosis, a reliable tool? (Issue 6).

Ufology proves its point (Issue 4).

The Fife Incident (Issue 6).

For sending me the Nessie report and letter (Issue 6).

Ron Pearson.

Key to consciousness- Quantum Gravitation (Issue 6).

Ernie Sears (SUFOG magazine reviewer).

Left at East Gate review (Issue 4).

Mark Fraser (Haunted Scotland).

Meet the groups (Issue 3).

Lionel Beer (TEMS).

A tribute to Nigel Stephenson (Issue 3).

For allowing me to print his flyers (Issue 3, 4, 5, and 6.)

For sending me the Historical Flashbacks cutting (Issue 4).

Flying triangles (Issue 4).

For sending me the Sky watch/Roswell case report cuttings (Issue 6).

Michael Hudson.

For the PC Text flyer (Issue 4).

Paul Damon

The Peruvian stargate (Issue 5).

This was written by Paul and I printed this article as it had no copyright. My thanks anyway.

Jean Bastide.

For the various cuttings that he sent to me (Issue 5).
UFOs and the small white spheres (Issue 5).

Rosemary Decker (American Ufologist).

Canals on Mars (Issue 3).
Martian artifacts (Issue 3).
UFOs and holograms (Issue 5).
For sending me the Arizona sightings cutting (Issue 6).

Michael Roll.

Proof on life after death? And how it affects Ufology (Issue 3).
History revisited (Issue 6).

Shane Pickering and Mark Van Rooyen.

'Was the Hale-Bopp Comet followed? (Issue 4).

Gary Rowe (Co-founder of the WFIU).

For sending me the information for the 'Never seen a UFO' article (Issue 1).

Qualiprint in Cardiff for printing the magazine at a reasonable price.

If I have missed anyone out I offer my apologies but I would like to thank everyone who has helped in any way.

This issue is the sixth to have been produced and I hope you can see the differences between this issue and the first ones. If you can't I have not done a very good job at all. As time as gone on, I hope that the magazine has improved with the presentation side. Any thoughts or opinions on any aspect of Dragon Watch I would be very interested in reading them. Just get in touch with me at the address given in the contents page.

And now to keep a promise. In the editorial of the fourth issue I stated that I would explain my reasons for discontinuing Dragon Watch. Well the decision was taken in the September of this year while I was preparing the fifth issue. very simply after looking at the finances of the magazine, it was plain to see that with the low circulation and the high costs in producing the magazine, I could not continue to afford to spend that amount of money any longer.

I need to get a few things sorted out in my personal life that cost

money and the costs of the magazine were draining my finances.

Also I felt that I had come to the end of the road as far as the magazine was concerned. At the end of 1996, there was considerable momentum to carry on as I was getting plenty of articles to print. Now there are a few contributors and I don't know if I could now print four 32 page issues next year. Very simply put it was the right time to stop. I also have another reason that contributed to my decision. I am interested in writing and especially comedy writing. I would like to pursue this line of writing and I now can do this as a result of the extra time I will have next year.

The summary of it is that I have lost a lot of money but learnt a lot while producing Dragon Watch. Something that could put me in good stead in the future. I am now free to pursue other subjects and interests but I would still like to keep in touch with the subject and maybe help other magazines

out if it is possible. Turning now to this issue I would like to highlight some of the the articles presented. The first item is by Ron Pearson on the mathematics of quantum gravitation. You may well ask why I have included this piece. Very simply it is because I printed an article by Michael Roll on how the answers can be found for the paranormal and strange phenomena using sub-atomic physics. The thinking is that there could be invisible worlds out there, the best way to describe it is as a radio, there are many frequencies, which is the basis of how atoms work, if you changed the frequency of the radio, you would get a different station, if you changed the frequency of the atoms, you could get different dimensions or worlds that interfere with this world at certain times. The article that I present is the mathematics of this analogy.

Also included is the article from Michael Roll about the suppression of knowledge although on a different subject it could be likened to the conspiracy theory and is generally an interesting read that is thought provoking. Back in Ufology terms, I also have pleasure in printing the Fife Incident that tells us the tale of very strange happenings in Scotland. Written by Malcolm Robinson and printed in many other magazines this may not be the newest story to have happened but it is still well worth reading. Well that's it for now and possibly forever, happy reading. Incidentally back issues are still available from the address given on the contents page.

My thanks go to Michael Roll, Malcolm Robinson, Rosemary Decker, Ron Pearson, and Lionel Beer for their contributions for this issue.

ARTICLES FOR THE FUTURE?

Over the six issues I have produced I have found the need to write my own articles to help fill the issues. Now that I am discontinuing to print Dragon Watch I would like to think that I can help someone else with their efforts. I would therefore like to highlight the articles under my name that people are free to use in any other publications, as long as they get in touch with me to say they are doing so. The only other things I would ask for is that Dragon Watch and myself are credited as being the original source and also a free copy of the magazine or newsletter it is featured in, would be nice as well! So if anyone is interested in any of the articles I have printed, a catalogue of the work under my name is printed in this section.

If you are interested in any of the other articles that have been contributed from other authors, just get in touch with me and I will pass on a contact address of the person whose work it is.

Here it is the list of articles that editors are free to use providing they abide to the conditions above.

ISSUE 1.

'A KIDS VIEW'

An article inspired by the sightings made by kids, to the WFIU and how they could be ignored! An article to help people think about sightings from dubious sources, but how they can be taken seriously.

'NEVER SEEN A UFO'

Another article that makes people

think why they have never seen a UFO. This is based on a sighting that was solved but also raises important points that contribute to the lack of sightings.

'THE MEDIA'S VIEW'

A look at the way the media treat the subject of Ufology, the links have either a direct or indirect link and may also refer to similar subjects.

ISSUE 2.

'LIFE ON MARS'

This was inspired by the findings of the fossils discovered inside the Martian meteorite. There is also mention of Professor Chandra Wickramasinghe and his theories on the origins of life.

'JUNIOR MEMBERS PAGE'

A two page article that was an experiment to try and cater for a younger audience. There is use of pictures and the article gives a basic, introductory and hopefully entertaining look at the subject.

'CONFERENCE REVIEW'

A comprehensive review of the Supernormal Research Conference held on the 21st of July 1996, and organised by Kerry and Tom Blower. There was a wide range of speakers and this is reflected in the review.

'SEEING IS BELIEVING'

An article based the sighting of a strange occurrence by my brother while he was working in America. It looks at how a witness needs answers when they experience or witness something beyond their comprehension.

'THE MEDIA'S VIEW'

Again, a look at how the media treat the subject of Ufology.

'HISTORICAL FLASHBACK'

A look back at the famous 1952 Washington sightings. Very revealing with some aspects of the sighting such as the time taken for any action taken by the authorities. Complete with cutting.

ISSUE 3.

'ERNEST WILLOWS THOMPSON'

A look at the history of Ernest Willows Thompson and the famous solved sightings over Caerphilly and Cardiff in 1909. Interesting especially if you want to know more about the history of Ufology.

ISSUE 4.

'THE BURDEN OF PROOF'

this article looks at what evidence is needed to prove Ufology as a subject to be taken seriously. It also demonstrates that if you don't want to believe in UFOs it wouldn't matter what evidence there is, with an insight in to the thinking of the hardest debunker.

'THE MEDIA'S VIEW'

A look at how the media treat the subject of Ufology.

ISSUE 5.

'THE MEDIA'S VIEW'

A look at how the media treat the subject of Ufology.

There are no articles under my name in issue 6.

GUIDE TO THE CUTTINGS.

This is a guide to the cuttings that are presented on the following pages. They are from a variety of sources and cover a wide range of aspects. I hope you find them of interest.

The first article on this page is a cutting on the recent Arizona sightings, my thanks go to Rosemary Decker for sending me the article.

The cuttings on page 8 have been sent from Lionel Beer and deal with two subjects. The first are the results of the Skywatch that happened on the 21st of June this year. The second deals with the statement of the laughable claims by the American government over the Roswell incident.

The cuttings on page 9-11 were sent to me by Malcolm Robinson of the SPI. The article on page 9 is an article from an Arab magazine with a mention of Malcolm Robinson. Can any understand this clipping? It seems that man gets everywhere. The article on page 10 and letter on page 11 deal with a story from the messenger of the truth, the whole truth and nothing but the truth: **The Sun!** It deals with the trap set to try and capture Nessie, apparently this has been organised by Steven Spielberg and Malcolm Robinson. *It is in the Sun so it must be true.* The letter from Malcolm clears up the nonsense and gives the proper story.

Tim Ley and his family had a clear view of the craft. "It was astonishing."

Arizona sightings confirm the TRUTH

IN THE most astounding close encounter ever reported, thousands of people witnessed a massive alien craft cruising the Arizona sky.

For more than an hour and a half, stunned residents in Phoenix and a dozen other cities within a 60-mile area stared in awe as the 6,000-foot-long V-shaped craft glided silently overhead as low as 500 feet at 30 mph; its red and white lights blinking.

"It was astonishing and a little frightening," says Tim Ley, who watched the unearthly light show with his family.

And Peter Davenport of the National UFO Reporting Center in Seattle, Wash., insists: "The incident over Arizona was the most dramatic I've ever seen."

He brands most UFO sightings as baloney, but not this one.

"What's here is the real thing," he says.

"THEY are here."

Dozens videotaped the UFO, and phones at police stations and

nearby Luke Air Force Base were jammed with callers demanding an explanation.

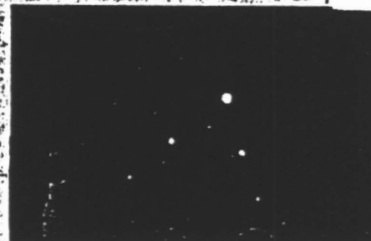

Pilots asked air traffic controllers at Phoenix's Sky Harbor International Airport to identify the lights, but they couldn't. The controllers could see the lights, but nothing showed up on their radar screens!

"Weird, inexplicable," says Bill Gravva, a pilot and controller for 12 years who was on duty at Sky Harbor. "I still have no idea what it was."

Lt. Col. Mike Hauser at Luke insists the Air Force hasn't a clue, either — but he can't convince truck driver Bill Greiner, who saw the mysterious craft. He was within a mile of the base when it was overhead.

Greiner says three F-16 fighter jets took off and veered right for it. Then it shot straight up and disappeared "like the blink of an eye," he recalls.

"I know those pilots saw it," says Greiner. "Hell, I'll take a lie detector test on national TV if that guy from the base does the same thing."

Ley created this computer image of what he saw

NATIONAL SKY WATCH Night Exercise, Sat. 21st June 1997

**Pewley Downs post, above GUILDFORD,
Surrey (Time: BST) - Site Report**

When I left Hampton at 7.45 pm. the eastern sky was filled with an amazing luminescent double rainbow, which remained for some while.

I went for a site inspection on Pewley Downs at 9 pm, saw two rabbits and noted that the wind and rain had abated.

Our group consisted of members of TEMS and SEMG (the Surrey Earth Mysteries Group): Eileen Roche allowed us to use her house as 'base camp', myself (Lionel Beer), Jimmy Goddard (SEMG co-ordinator), Richard Colborne (a former BUFORA NIC), Hugh, Robert Haining, and Charles Refoy.

We jointly went on site at 10 pm and set up a portable picnic table on the Downs, and had our record photo taken at 10.15 pm. At this time there was almost 100% cloud cover. Shortly after, Richard Beet joined us, and we were pleased to see him as he was one of the original SIGAP (Surrey Investigation Group on A.P.) officers (and editor of

PEGASUS) who were present at the famous sky-watches in the sixties.

The first aircraft were not noticed until 10.35 pm. One flying from south to north overhead at cloud level appeared to resemble a flying triangle, but there was nothing to suggest that it was other than a conventional aircraft. Later on, aircraft lights were noted to the ESE and were assumed to be associated with Gatwick air traffic control.

At 11 pm there appeared to be two bright flashes in the clouds slightly to the south. It was deduced that these might be reflections from electric train pick-ups, as we could see the railway and trains to the SSW of us. However at 11.05 pm, we realised that a major fire work display was taking place to the west of our site, which included some colourful and expensive mortar shells. A sound delay of several seconds, suggested that they must have been near Farnham. We noted the direction of moon-rise but cloud-cover was such that we saw it and a couple of stars only briefly. Richard Colborne announced that he had seen a 'glow worm', which seemed unlikely in view of the weather and temperature, but all our team confirmed the sighting in the wet grass!

After midnight we returned to base camp due to the deteriorating weather. Three of us returned at 4 am to see the cloud-obscured sunrise and there was nothing more of note, but we felt that we had done our duty. Lionel Beer.

THE FOLLOWING SHORT ITEM FROM *JANE'S DEFENCE WEEKLY*, SHOULD BE READ WITH A STRAIGHT FACE!

USAF presents 'Case Closed' over Roswell

Alien bodies supposedly recovered in New Mexico in 1947 were actually human-like dummies dropped during the mid-1950s, the US Air Force revealed in a new report on the famous Roswell UFO incident.

The USAF contends that the reported 1947 crash of an "extraterrestrial flying disc" and its "alien" occupants were debris from Project Mogul, a high-altitude balloon research project. The programme was to determine whether a sound channel exists in the upper atmosphere that could be used to detect ballistic missiles.

The mostly unclassified Project Mogul used acoustical sensors, radar reflecting targets and other devices attached to a train of weather balloons more than 180m long. In 1947 a rancher turned in the radar targets to the local sheriff, allegedly after hearing media reports of flying discs.

The first claims to have seen

The first pictures of the USAF's high-altitude balloon experiments and (inset) the dummies dropped in the mid-1950s (Photo US DoD)

bodies came in the late 1970s, leading USAF officials to argue that the memories of witnesses have consolidated air force activities for a period of years into a handful of days in July 1947. The witnesses are "wrong about the 1947 date", said USAF Col John Haynes in a Pentagon briefing.

From 1953 to 1959, the Air Force Aero Medical Laboratory used anthropomorphic dum-

mies as part of high altitude aircraft escape projects called High Dive and Excelsior.

These programmes aimed to devise methods for returning pilots or astronauts to earth by parachute should they be forced to escape at extreme altitudes.

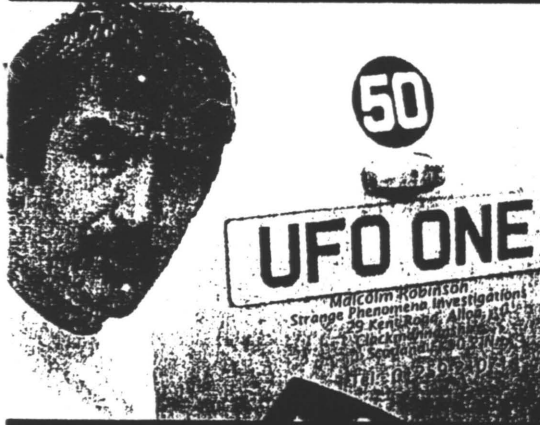

The dummies, transported by balloons to altitudes as high as 98,000ft (30,000m), fell freely while instruments recorded

body movements and escape equipment performance. Forty-three high-altitude balloons carrying 67 dummies were launched and recovered across New Mexico between 1954 and 1959 and 30 were dropped by aircraft over White Sands Proving Ground, New Mexico, in 1953.

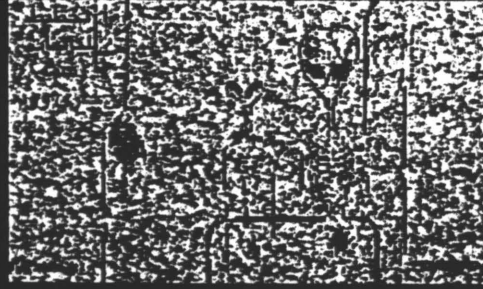

"The dummies were sometimes transported to and from off-range locations in wooden shipping containers, similar to caskets, to prevent damage to fragile instruments mounted in and on the dummy," the report said.

In 1994 the USAF released its first Roswell report on the order of a New Mexico congressman. The USAF said it has volunteered this second Roswell report to answer "lingering questions" about sightings of alien bodies, a subject not discussed "extensively" in the 1994 paper.

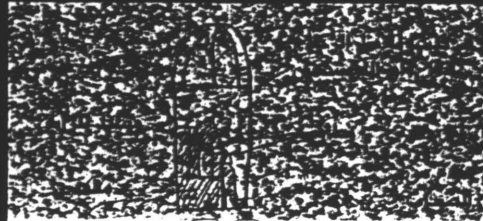

Subtitled 'Case Closed', the new document also serves as a pre-emptive strike against the publicity that is surrounding the 50th anniversary of the incident.

الدكتور مالكوم روبنسون: المتخصص في علم الظواهر
الغريبة، والمسؤول عن ملفات قضية جاري وود وكولن رايت

.. وتخطيط لكرسي العمليات داخل الطبق الطائرة
رسمه كولن رايت

عندما شاهدها كانت جالسة ومعطية
برها لي. وكانت عارية وتضم ركبتيها الى
درها بشدة، في محاولة لتغطية جسمها
باري، وكانت عيناها حمراوين من شدة
كاء.

● هل كانت هذه الفتاة بشرا؟

نعم، اعتقد ان عمرها حوالي 19 او 20
سنة. وكان شعرها مجعدا، بني اللون يتخلله
بعض الاصفر. اما لون جسمها فيبدو انه تعرض
لشعة الشمس، ولم تكن على وجهها مساحيق
كثير. شعرت بعجزي نتيجة عدم قدرتي على
مركبة ومد العون لها. سيظل وجه هذه الفتاة
رسبا ومحفورا في ذاكرتي، واعتقد انني اذا
رأيتها مرة اخرى فساعرفها.

SPIELBERG WANTS TO HELP CAPTURE NESSIE

Steven Spielberg and (right) Malcolm's Nessie trap

He backs monster trap

By MATT BENDORIS

MOVIE mogul Steven Spielberg is set to team up with a Scots Nessie hunter—in a bold bid to capture a REAL dinosaur.

Spielberg—whose new £47 million film *Jurassic Park: The Lost World* was released yesterday—will link up with fellow dino-buff Malcolm Robinson.

Robinson sent blueprints of his elaborate Nessie booby trap to Spielberg's Dreamworks company HQ in Los Angeles—and promised: "Give me a tenth of the cash you spent on *The Lost World* and I'll give you Nessie on a platter."

And Spielberg, 50, is seriously considering the Nessie project.

The world-famous director said: "I've been fascinated by dinosaurs since I was a kid and I've always believed Scotland has the living article."

"The Loch Ness Monster has been a hobby of mine for years."

"I have been considering ways of proving its existence to the world and for my own

personal gratification. But it would have to be a method that wouldn't injure the creature in any way."

Now Malcolm, 38, from Alloa, Clackmannanshire, believes he has found a way to nail Nessie once and for all.

Malcolm said: "The biggest problem with Loch Ness is poor visibility. It's so bad you can only see four feet in front of you."

Darts

"So I have devised a plan that would allow us to keep track of Nessie."

"The contraption would look like a boxing ring, with cables attached to four pillars 50 ft apart which would be sunk into the loch floor."

"On the cables would be small circular spheres with darts sticking out of them. These darts would have a radio transmitter attached."

"Inside the boxing ring would be a giant rotating pillar that would dispense fish paste into the loch and hopefully

attract whatever is down there to swim through the cables."

"As Nessie weaves through the cables to the food, darts would stick into her body allowing us to track her from a boat."

"The darts wouldn't harm Nessie—they would be serrated like a fish hook to hold in place."

Malcolm went on: "By following Nessie we could pinpoint exactly where she is and drop a video camera down on top of her when she stops moving."

"This would give us proof that she does exist. Getting a picture would also allow us to get an accurate estimate of her length and weight."

"The most popular theory is that she's a plesiosaur, an extinct dinosaur that lived in the sea."

"Loch Ness is a fresh water loch but millions of years ago it was open to the sea before it closed over, apparently capturing the animals."

The plesiosaur theory was sparked by a string of eye

witnesses who say they've seen a long, slender neck with a small head poking out of the murky depths.

This would tie in with fossils of the prehistoric marine animal.

Its body was broad and compact with large paddles—and the plesiosaur would have thrown its head and sharp teeth like a sling at its prey.

Malcolm said: "The most successful attempt to prove something was down there was Operation Deep Scan three years ago."

Failsafe

"Boats swept the loch with ultrasound scans and tracked a 30ft long moving object."

"It dived to the bottom of the loch and disappeared."

"But with radio transmitters attached to Nessie's body then we wouldn't lose track of her."

"It may sound ridiculous but it's probably the most failsafe idea to be created over all these years."

And he grinned: "If it falls flat on its face then I'm sure with all his money Spielberg could afford to drain Loch Ness to find this monster."

Sun EXCLUSIVE

**S T R A N G E
P H E N O M E N A
I N V E S T I G A T I O N S**

STATEMENT ON THE SPI/SPEILBERG NESSIE HUNT.

Please also find enclosed, a newspaper cutting from the Scottish Sun which may be of interest to your readers. However, being the Sun, they have of course embellished the story somewhat and gave it 'arms & legs', let me explain.

It was the Scottish Sun that phone me and asked me what would I do if I had one million pounds in which to prove the existence of the Loch Ness Monster. ? I told the Sun, that funnily enough, I've had an idea in my head for a few years on this very issue, and that I had plans of a cage in which I felt could be in the capture of "Nessie". The chap from the Sun asked to see my drawings, and I sent them off to the Sun, **"And not directly to Steven Speilberg as the Sun would have you believe"**.

I also never said, "Give me 10% of the takings of the Lost World and I'll give you "Nessie" on a platter. And I also never said, "With Speilberg's money, he could afford to drain the loch. Typical 'added on journalism'.

Anyway, I hope that Speilberg does become interested in this project, it would be good business for him, added publicity for him in the days of The Lost World, but ultimately, all eyes would be on him in his search for a *"Real life Dinosaur!!*

It remains to be seen if this project gets off the ground, but I would ask that you, 'stay tuned' as they say, I don't think we've heard the last of this story.

All the best for now, keep up the good work.

Yours Sincerely,

Malcolm Robinson,
SPI/BUFORA/MUFON.

BOOK REVIEW.

TITLE: Of No Defence Significance ? **AUTHOR:** John Jenkins. **PUBLISHER:** The PEN-Y-COE PRESS, 7 Bridge Street, Penicuik, Midlothian, Scotland, EH26 8LL. **PRICE:** £4.99.

Since the author's own UFO sighting back in December 1992, the subject of UFOs has held a deep fascination for him, so much so, that he decided to go on a one man crusade and delve into researching the mysterious world of UFO sightings. This book, is the culmination of John's efforts and research. It is an informative little booklet which contains a number of UFO cases that John himself has personally been involved with. No book on Scottish UFO reports would be complete without including the Bob Taylor UFO Incident of 1979, and John presents the case here in graphic detail. There is also some new information about this impressive Scottish case which I won't disclose here, (buy the book and find out !).

The UFO sightings of Joyce Byres from Moffat are perhaps not so well known to some UFOlogists, but I'm pleased to see that the author discusses them here. This concerns a wave of UFO reports in the Dumfries and Galloway region of Scotland back in the late 1970's and early 1980's. The author presents some of these cases which even today, still sound impressive, (I know, I cut my teeth on these early UFO sightings !!).

But the big cases in this book, are that of the A70 Incident which is briefly covered here. This concerns the abduction of two Edinburgh men who came in direct contact with a UFO hovering above a road. This is an immense case, and John discusses it's implications here. Another big case, is that of Andy Swan who saw a UFO at close quarters of which he then telephoned the police who came out due to the distress that he was in. John informs the reader all about this case and one is left with the distinct impression, that this object clearly was not man made ! The UFO sightings at Bonnybridge are also briefly discussed here and a number of new and never before published cases are presented for the very first time.

The good points about this book must be the information that it contains, some of which, as I say, is being presented for the very first time. My only minor criticism of this booklet, is that it has no page numbers or table of contents. That aside, this is a smashing wee publication which will no doubt prove to be a hit amongst UFO fans young and old alike. A fine booklet then, and one worthy of gracing anyone's bookshelf.

BOOK REVIEW.

TITLE: Coevolution, (The true story of a man taken for ten days to an Extraterrestrial civilisation). **AUTHOR:** Alec Newald. **PUBLISHER:** Nexus Publishing, 55 Queens Road, East Grinstead, West Sussex, England, RH19 1BG. Tel: 01342 322 854. **PRICE:** (check with publisher !).

Well, what an incredible story (if true ?) this is. During mid February 1989, Alec Newald set off in his car for what should have been a 3 hour drive to Auckland in New Zealand. On the way there however, he claims to have been abducted by aliens who took him on board their spacecraft and after which he was then taken to their home planet. This all seems the stuff of a 1950's B movie. Fanciful stuff ? Perhaps. However I'll say this, this book whether true or not, is a riveting read and informs the reader a great deal about the 'aliens' who abducted Alec and all about their home planet as well. Alec learns from the 'aliens' that they wish to 'co-evolve' with us in which they wish to be more like us, and we to be more like them !! Alec also learns that these visiting 'aliens' have underwater bases under our oceans which is actually consistent with some witness testimonies who have seen UFOs entering and leaving our oceans.

During Alec's time on board this UFO, he strikes up a friendship with a female 'alien' called Zeena, which to this reviewer, sounds suspiciously like the name Weena which was used in the Rod Taylor film, *THE TIME MACHINE*. In this film, Rod Taylor finds himself being shown various things by a girl called Weena. Whilst in Alec's case, he is being shown things by his 'alien' friend Zeena !!! Alec has to contend with wearing a tight body suit during his abduction which clings to his skin and also provides nourishment, the down side of this though, is that it takes away all of his bodily hair, (including his head !). Alec is also informed that other 'aliens' have long visited planet earth and left their mark, particularly in Egypt and throughout the Mediterranean.

The 'aliens' home planet we are told, is called Haven, which again is suspiciously like our own fanciful Heaven, (just a thought !) Alec describes the buildings and life on Haven, and several illustrations of these are given throughout the book. Alec was also told that planet earth did not always have it's moon, this only came into being around 12,000 years ago !! Upon Alec's arrival back on Earth, he is hounded by Government officials of whom show a distinct interest in Alec and also his car. He subsequently learns that these chaps know all too well about the 'aliens' and why they are here. Moreover, Alec states that over the next few years, there will be a marked increase in UFO activity, culminating in the arrival of spaceships en-masse. This is a fascinating book of which no doubt many people will not agree with or accept. It does perhaps border on your belief zone, but unless you read it for yourself, you'll never be able to make that judgment. Reviewed by Malcolm Robinson, SPI Scotland.

BOOK REVIEW.

TITLE: A Dictionary Of Omens And Superstitions.

AUTHOR: Philippa Waring. **PUBLISHER:** Souvenir Press Ltd, 43 Great Russell Street, London, England, WC1B 3PA.

PRICE: £8:99 (Pbk).

As we all know, the subject of UFOs, ghosts, poltergeists, and associated subjects, are gaining more and more credence as the years roll by. These subjects don't appear to be laughed at as much as they did say 10 to 15 years ago. Of course a number of authors have recognised this developing situation, and I feel, are capitalising on this by re-releasing a number of books on these subjects. This book for instance, was initially released back in 1978, (the year I got married, gosh !!), and is a pot-pouri of weird and wonderful superstitions from around the world.

Of course many of the tales and superstitions included in this book, are probably just that, 'superstitions' and nothing more, but a lot of them do have 'something' which warrants serious attention by clear thinking individuals. There are far too many superstitions contained in this book to go through, but here is a selection of which after having read the book, proved quite a surprise.

St Christopher Medals. We learn that these medals have become very popular in today's culture, but did you know that there is real doubt amongst historians and ecclesiastical scholars as to whether St Christopher ever really existed ? Wow. Or how about **Railways.** Did you know, that if you talk whilst going under a railway bridge illfortune will follow you ! (Have you ever seen a railway carriage full of silent commuters when they see an approaching bridge ! I haven't.) **Oysters.** Anyone who eats an oyster on St James day (5th August), will never go hungry, [try telling that to the poor and starving on our streets]. **Tennis.** And for all you tennis players out there, did you know that if you hold three tennis balls in your hand while serving a game, it will bring you bad luck, ah, so that what's been wrong with my serve !

As we can see, some of these superstitions, and believe you me, there are hundreds in this book, are entertaining if not humorous. Don't get me wrong, this truly is a marvelous collection of such tales, and will prove a great reference book to quote from whenever one is doing a study on such matters.

A fascinating book then with many omens and superstitions to pass the hours away, yes a good read, perhaps not everyone's cup of tea, but nonetheless entertaining.

BOOK REVIEW.

TITLE: Secret Societies. **AUTHOR:** David V. Barrett.

PUBLISHER: Cassell Plc (Blandford), Wellington House, 125 Strand, London, England, WC2R OBB. Tel: 0171 420 5555.

PRICE: £18.99 (Hbk).

I must admit that when I was sent this book to review I felt that as these subjects are really not my cup of tea, that I would not enjoy it. Well what a surprise I got having finished it. This book truly is 'THE' book on Secret Societies. I never realised for a moment, that so many different and varied societies have been 'operating' in the world, each of whom have their own set of values and agenda. Author David V. Barret, informs the reader about societies such as the, Ku Klux Klan, on which on a personal basis, I have no time for and detest their unruly methods and methodology. The Chinese Triads are also looked into and their history and reason for being, is given in extremely explanatory tones !!

This book is not a muddle of different societies, the author has painstakingly put in order, the roots of these societies, which is followed by the witch hunts, Freemasonry, Esoteric Societies, (which includes the Rosicrucians, Aleister Crowley, Esoteric Tarot and the Order of the Golden dawn). Each chapter gives the reader an in depth look at many of the world's secret societies, with amazing and startling revelations, many of which will either upset you, or make your blood boil !! [it did with me]. The author asks, "Why do people want to join such secret socities, what do they hope to get out of them ?" He responds by saying that it is for a whole range of different reasons. Some of which have to do with becoming more successful in their life, a chance to increase their memory, whilst some feel a genuine need to get closer to God !

Where I found this book most 'illuminating', is when the author goes into the history and beliefs of these societies, the Spanish Inquisition is looked at, the Cathars and the Quest for the Holy Grail, and the fact that many occult socities had connections with the Nazis. Having read this book, I feel that the author has done a tremendous job in bringing together the vast and complex world wide secret socities which 'operate' throughout the mankind. This is a very impressive book which I cannot recommend highly enough. It proved a great surprise to me having read it, and I suggest that if you would like your eyes 'opened' into the subjects mentioned above, (and many many more), then you can't do any better than picking up a copy of this book.

BOOK REVIEW.

TITLE: "Walks In Mysterious Wales". **AUTHOR:** Laurence Main. **PUBLISHER:** Sigma Press, 1 South Oak lane, Wilmslow, Cheshire, England, SK9 6AR. Tel: 01625 536 800. **PRICE:** £6.95.

Sigma Press have released three books on the subject of "Mysterious Walks", this one, concerns walks in Mysterious Wales, and like the other books, is full of illustrations and photographs of locations to visit. Maps and distances involved with these walks, are also given and present to the reader, a wealth of information which will prove valuable whilst they try and cover these mysterious walks over the Welsh countryside.

Author Laurence Main presents stories to fascinate you with, with tales of Earth Lights, Ley Lines, walking where Fairies used to walk (!!) Dreaming in ancient circles, and visiting the scene of the fabled King Arthur's last battle. Standing stones and ancient mythological tales are also explored. One of the more interesting stories that I found contained within this book, was the story of the Dragon of Denbigh. But there is also a sprinkling of ghost stories, of which the ghost of Gwennllian stands out.

Of course, it may take longer to pronounce some of these Welsh names than it is to actually do the walks, but that aside, this is a fascinating little book with many wonderful and varied tales, and for any visitor who would like to immerse themselves in some historical walking, then this little book is for you.

There is however, a few pages on some of the more common words to be found in the ordnance survey maps which assist the intrepid explorer. The Welsh term for hill for instance, is bryn, whilst the Welsh term for fort is caer. A pile of stones which in Welsh is, carn, carnedd, and a deep hollow is cau. This will assist you in understanding some of the words that can be found on some of the Welsh ordnance survey maps. The author does not forget to remember the reader to always follow the country code, and a few helpful tips are given to help you when you venture into the Welsh countryside.

All in all then, this is an educational book which will bring you to a different approach in rambling, where you will not only enjoy your walk, (the longest of which is nine miles), but will enable you to visit some fascinating places. Nice one.

HISTORY REVISITED

BY MICHAEL ROLL.

In 1936 George Orwell the renowned author of the book 1984, said to a fellow writer and chronicler of the Spanish Civil war, Arthur Koestler: "I know it is the fashion to say that most of recorded history is lies anyway but what is peculiar to our own age is the abandonment of the idea that history could be truthfully written."

It must have been about this date that Arthur Findlay set about the task of writing the true history of mankind from 3,000 BCE to the end of the second world war, which he called, The Curse of Ignorance, which in my opinion should be sent to every educational establishment in the country.

Prince Charles supports Welsh chair for Psychic science.

How significant that the future King of Great Britain wrote to the University of Wales urging them to take the money Arthur Koestler has left to set up a chair to study psychic science.

We are in this world but we are not of it. We come from and will return to the vast unseen universe that the nuclear physicists have recently discovered. The same universe that the psychical researchers have known about for over a hundred years.

The greatest historical lie of all has now been laid bare, our western civilisations is not thanks to Christianity but the very opposite is true, our civilisation is in spite of Christianity!

This fact was made very clear when the BBC showed the thirteen part television serial, 'Cosmos', written by the American astronomer, Carl Sagan. It has been estimated that this programme has been seen by

150 million people throughout the world. Many were astounded to find that we have been deliberately deceived by our history teachers, that the truth is completely opposite to what we have been taught from birth. Carl Sagan told the shocking but true story of how in the year CE415, a christian mob, acting on the orders of Archbishop Cyril, murdered Hypatia, the female principal of the great library in Alexandria. This remarkable woman was a mathematician, astronomer, physicist and philosopher. On her way to work she was dragged from her chariot and the mob, armed with abalone shells, flayed the flesh from her bones. Her library, along with priceless manuscripts, was burnt to the ground. Cyril was made a saint. Unfortunately this was not an isolated incident but one small part of a carefully organised plan to eliminate paganism from the Roman Empire.

If we look up the history of education in the Encyclopedia Britannica, it reads rather like a western movie: The good guys (christians) slowly but surely overcoming the bad guys (pagans): the same encyclopedia gives the definition of pagans as unenlightened, idol worshipping, raw rustic heathens. Hypatia, along with all the brilliant Greek and Roman philosophers, scientists and educationalists are always described as pagans in our official history books.

An explanation of our universe.

This includes Thales, the founder of geometry, astronomy and philosophy and the first to attempt an explanation of the universe apart from theology, and Pythagoras who was the father of mathematics and

the first to say that the world was round. This statement that the world was round was actually proved by Eratosthenes in the 3rd century BCE who even measured its circumference. Hippocrates, the first man we would call by the name of doctor approached the cure of disease in a truly scientific manner. He discarded the idea that illness was a punishment for sin or caused by devils. By the 3rd century BCE anatomy had revealed something of the internal workings of the human body.

However the christian belief in the resurrection of the physical body brought investigation to an end until the 17th century. In the 4th century CE Pergamon and all the other Greek and Roman hospitals and sanatoria were destroyed by Christian fanatics, their doctors being massacred or exiled. Aristarchus in the 3rd century BCE said that the Earth was not the centre of the universe but revolved round the sun. Copernicus discovered this man's work in the 16th century. Theodoras invented the key, ruler, carpenter's square, level, lathe, bronze casting although there are no statues to this man because he did not kill anybody! Epicurus and Zeno, 3rd century BCE, two most illustrious moral philosophers, emphasised the need of improved ethical conduct and taught that only through right living could happiness be obtained.

Anaximander, 6th century BCE, the father of modern physics, also anticipated Darwin. He was followed by Anaxagoras who said that the moon was a place like the Earth, not a god. Empedocles discovered the invisible and Democritus propounded the theory that matter is composed of atoms. He thought religions were devious and evil. Archimedes' inventions led to practical scientific discoveries. Euclid taught man to think calculate and reason. Ictinus was the great architect of the Parthenon. Socrates (470-399BCE), the outstanding philosopher and medium taught the unity of mankind and a life after death. Just before the priests forced him to take poison his

friends asked him where he wanted to be buried, to which he answered "Catch me if you can". Plato, who was taught by Socrates passed on his great wisdom and codes of conduct to Aristotle whom many declare to be the greatest scientist of them all. Quintillian (CE 35-96), a Roman citizen led the Roman world in education on the lines laid down by Plato. He was the equivalent of our Minister of Education, a government office which was not created until 1868. This most outstanding of all Roman school masters loved liberty, justice, truth and mercy besides abhorring all forms of cruelty and oppression. To him ethics took the place of religion as the only safe guide in correct conduct.

The world plunged into the Dark Ages.

This then is the pagan civilisation that was destroyed by Christendom after the Council of Nicea in CE325. It was here at Nicea that an all embracing (Catholic) religion was formulated and adopted as the official religion of the Roman Empire. Jesus a wandering Jewish teacher was made in to the Christ or anointed one, the seventeenth anointed saviour god known to history and the second person of a trinity of gods. In my opinion to have confused Jesus, the man with Christ, the saviour god is a gross historical blunder. All who did not confirm to these outrageous doctrines were murdered or exiled. The world was plunged in to the Dark Ages, not to emerge again until the invention of printing which coincided with the fall of Constantinople in 1453. The few scientific books that had not been destroyed by the early holy inquisition again saw the light of day. From this date the human race has slowly but surely began to free itself from the curse of priestcraft and ignorance. Even though the holy inquisitors tried with all their might, they could not kill fast enough to keep up with the printing presses. The smell of printers ink was indeed the incense of the renaissance.

CE 325 is the most important date in the history of mankind because the decisions that were taken then, by appallingly ignorant priests shaped the future of humankind for the next sixteen hundred years. Yet only a handful of academics are cognisant of this fact. It is not difficult to understand why historians avoid this date like the plague. Before the Council of Nicea historians estimate that there were over 150 different Christian sects all insisting that their own particular tenets were the correct ones. These fanatics were ripping the Roman Empire apart so we can understand why the great Roman Emperor, Constantine the Great, called this Council to formulate a Catholic (all embracing) religion. Constantine was a cold blooded murderer; he not only killed his wife, his son and nephew but was also responsible for ordering the death of thousands more.

This Christian hero was great all right; a great killer!

The recent Martin Luther celebrations have highlighted some very uncomfortable facts that we were never taught at school. In 1524 during the Peasants Revolt in tones indistinguishable from Hitler's, he incited the ruling Princes to massacre the insurgents.

"A prince can best obtain merit by shedding blood," he stated. "One must dash these people in pieces, slaughter them, stock them like pigs both in public and in private, when ever one gets the chance."

The resulting carnage left more than 100,000 dead!

In 1543, Luther advised that the synagogues should be set on fire and Jewish homes like wise destroyed. Now we can understand why the Bishop of Birmingham, Dr. Hugh Montefiore, said that the Nazi holocaust could never have taken place had it not been for the theological thinking of Christendom about Jews and their ostracism by the Christians of Europe.

It is at this point that what seem to be "straightforward" priestly suppressions, suddenly take on a more sinister complexion and turn into an establishment conspiracy of awesome proportions.

No doubt many readers are wondering why our country's academics have not seen these simple historical distortions. The answer is that every academic knows that we have all been fed a pack of lies and therefore they are just as guilty as the priests in suppressing knowledge for they have just as much to lose when the truth is told. Thankfully not all are selfish bigots; there are many good people who care more about the future of humankind on this planet than merely preserving their own reputations. Some are no longer prepared to live a lie and seem relieved that the truth is now being told.

EDITORS NOTE.

This article first appeared in the September 1997 issue of the The Rostcrucian Beacon, there has been a very good response to this article. However there is a lot more to this subject as the author will tell you. In his booklet 'The Suppression of Knowledge' he goes in to a lot, lot more detail. It certainly is a revealing read. If you wish to get in touch with Michael Roll, he can be reached at the following address.

HYPNOSIS, A RELIABLE TOOL?

It would seem that the subject of hypnotic regression as a tool to extract any possible hidden subconscious memory from a UFO abduction, is a topic of which is highly controversial within the UFO community, more so with researchers themselves.

*Should it be used?
Are there hidden dangers?*

Or is it possible as I postulate, a tool which can at the very least, provide us with information which is beneficial to the study of the UFO phenomenon?

There is no doubt that hypnosis stands on shaky ground, there will always be, no matter what, a difference of opinion on the use of it in the study of witness recall. We can argue about it till we are blue in the face, but the hard facts remain, that no matter what, you can't please all of the people all of the time. So why do I as a researcher, believe that we should be using hypnosis in the study of witness recall?

Read on.....

First and foremost I appear to have upset a fellow researcher by the name of Kevin Mclure, a man I deeply respect, and who is in my book, a fine investigator. I have no axe to grind with Kevin, we differ

deeply on this issue. He believes that we should not be using hypnosis, whilst I believe we 'should'. Kevin recently submitted a letter to many British researchers about why we shouldn't be using hypnosis, in that letter he criticises me for advocating it, and calls into question my integrity as a researcher for doing so. I feel I have to react to this criticism and do so now through the writing of this article.

WHY I FEEL HYPNOSIS IS BENEFICIAL TO THE STUDY OF THE UFO ABDUCTION.

OK at the end of the day, we are largely dealing with the witness, as the UFO has long gone. Researchers should treat witnesses with the highest of respect and dignity and respect their wishes at all times during an investigation, this also implies if the witness does not wish the use of hypnosis conducted on them.

Now as a researcher, it is my job to get to the truth, and in doing so, I feel that I should get to that truth by the use of any manner of means that is available to me. It would not be professional to throw out 'any' means of assistance to a case study simply because so and so says that you can't use that method... I do strongly accept that hypnosis is not

BY MALCOLM ROBINSON.

the be all and end all of investigation, it has it's pitfalls, it may not be the the best means of finding out what the witness experienced.

People can lie please the hypnotherapist whilst under hypnosis, of course there are problems with it, I would never state there was not. So why then do I, and as an accredited BUFORA investigator, whose group has outlawed the use of such practice, still carry on with it? As an individual, I do honestly believe, that the use of hypnosis can unlock certain doors of the mind of which can release previously suppressed information, or memories which are too painful for the conscious mind to allow recall and in effect 'forces' it to the back of the mind.

None of us wish to remember events in our lives which proved painful, and the human mind has a great capacity for suppressing these memories.

The thing is, those memories are still there, they will never go away, unless in extreme medical conditions, a severe knock to the head for instance of which has happened to numerous people when they totally forget their own family and friends. My point is that police authorities the world over do use hypnosis and recognise the importance of doing so.

They have used it sparingly in cases in which they felt would benefit the case they were working on. And let us not forget, the police have also used psychic mediums in the hopeful detection of missing persons, is that wrong as well?! But the million dollar question is "Can we accept anything that comes out of hypnosis"? Yes and no!! It must be used, but used only by professional and qualified practitioners, and not done by stage hypnotists or 'back street' wise guys. Ufology is a serious subject and should be treated seriously, and only properly qualified people should be allowed near the witness, and even then purely on the instructions and requests of the witness.

I would now like to address some of Kevin Mclure's misinformed statements about myself and members of SPI, and our belief that hypnosis should be considered in the study of the UFO witness.

1. Kevin appears troubled that we are SPI used a psychic medium in the A70 Scottish UFO abduction case. And refers in his widely circulated letter, about a reference in our previous Journal ENIGMAS NOV/DEC 1994 about this. He states that the A 70 case was developed using (as he calls it), 'amateur regression hypnosis'. Dear, oh dear, why do people write things without checking their facts first? Although the regressionist concerned was also a psychic, she was/is a professional and qualified hypnotherapist, she

was not a 'fly by night practitioner'. She was qualified, end of story.

2. I did not encourage one of the A70 witness to investigate the recent 'Fife Incident', he, (Garry Wood), found about the case before I had already partly investigated it. Garry's own experience, he is absolutely desperate to find an answer to account for what happened during his own experience, and has thrown himself into Ufology with such intense vigour, that it has surpassed anything that I have seen before. He is like a demon possessed to find an answer. So I DID NOT push Garry into researching the Fife Incident. Again, Kevin did not check his facts here.

I'm not alone in being the sole thorn in Mr. Mclure's side. He has also had a go at Matthew Williams and Derryl Sims. The human mind harbours still hidden discoveries. We only use but a percent of it. Some people say that those psychic individuals can tap into a hidden store-house in the brain of which most people cannot.

Like I say, there will always be a division of opinion on this matter, and to be honest, I don't think that there will come a time when we can all agree on what is best. It is certainly a case just now that this is a hot potato, but it's right that we should be debating it. Let's not throw out the baby with the bathwater, what a silly thing that would be to do.

I must point out that I am not falling out with Kevin or anyone else on this issue. This is purely a division of belief, that's all nothing else.

At the end of the day, whatever information we can provide to assist in the uncovering of the UFO phenomenon, 'must' be for the good, but let's ensure that we know what we are doing, that qualified, and only qualified people are allowed near our witnesses. This isn't a stage show, we are dealing with people here. But let us not forget the fact as researchers we must get to the truth, with no leading questions.

It would be a sad day for Ufology if we kicked into touch, a subject which might show us the way in the understanding of the UFO enigma. That subject is hypnosis and I say let's use it.

THE FIFE INCIDENT.

**BY MALCOLM ROBINSON,
FOUNDER OF SPI.**

PREFACE: Ufology can throw up some pretty challenging cases, and many investigators world-wide have seen how vastly perplexing this subject can be. High strangeness cases are on the increase, but what exactly does this tell us? Here in Scotland, recent case would suggest that strange things are still afoot. Not only has there been photographic and video evidence of late, but we have had a few CEIV close proximity case, with witnesses claiming encounters with small 'grey' alien beings.

The following case, to all intents and purposes, is quite staggering. It borders on the unbelievable and even for this researcher was quite hard to accept.

But having said that, one must realise that we live in a strange world with many mysteries which currently tax our minds. It would be foolish to turn our backs on these mysteries just because they sound absurd. The following case features elements both common and uncommon. It was initially featured in the English based QUEST INTERNATIONAL publication, "UFO MAGAZINE."

I would now like to present Strange Phenomena Investigation's research into this most fascinating case, but before I do so, I would like to inform the reader that after this case was featured in UFO MAGAZINE, all witnesses refused any more interviews with Scottish or English researchers. They have told their

story and now wish to get on with their lives. We at SPI accept this decision, as it is becoming more and more common with cases of this nature. Thankfully SPI managed to interview two of the four witnesses in this case, and what you are about to read is the culmination and extracts of a most fascinating audio-taped interview.

THE FIFE EVENT, 23rd SEPTEMBER 1996.

SPI learned of this event a few weeks after it occurred, and in a telephone call to one of the witnesses, we arranged a date and time to visit and interview. Malcolm Robinson accompanied by Billy Devlin and Garry Wood, travelled up by cars to where Mrs Mary Morrison (pseudonym) lived, to an area of Fife in Central Scotland. The area itself is covered by farmland and there are many small farms secluded about the landscape. The area is therefore not heavily populated, and the contours of the land rise and fall at different locations. After getting lost, we eventually found Mrs Morrison's farm and introduced ourselves to her. We found her to be a warm and pleasant person and quite attractive. Her farm house actually sits on the top of a hill which gives a commanding and panoramic view of the Fife valley.

After our introductions, Mary then settled down to tell us quite an incredible tale. I sat back in my chair, and was amazed as this strange tale unfolded. This is what she had to tell SPI.

A NIGHT TO REMEMBER!

On the evening on the 23rd of September 1996, Mary Morrison, accompanied by her ten year old son Peter and Mary's friend Jane, left her farmhouse home to travel to a nearby town to buy some coffee.

The time was around 8.05 in the evening. On the way there, they observed a huge white stationary light in the sky, initially observed by Mary who was driving. Mary presumed that this light was either an aircraft or a helicopter, but after a few seconds realised that this was not the case, as the object was still not moving. This bright light then amazingly changed in to two bright lights, at which point Mary said to her friend, "Look at those bright lights up there", to which her friend replied, "It must be an aeroplane."

Mary decide to stop the car and get out for a look, still thinking that perhaps it could be some form of aircraft. Everyone alighted from the car and stood next to the road, looking up in bewilderment at this strange spectacle in the sky, "This was weird," she said, but things took a turn for the worse when suddenly two massive bright spotlights illuminated the ground around them. Beams of light criss-crossed one another in a spiralled dance which captivated all the witnesses. After a period of seconds, these huge bright white lights were switched off and Mary became aware of looking at a large black triangular shaped object. This object then proceeded to bank very gently and Mary then became aware of small red lights at each apex of this triangle while a brighter light source(white) was obscured to them as this object slowly turned. As the object completed it's turn further small red lights were observed on its underside. No noise was associated with this object and there were no visible signs of any appendages. However Mary did say that she saw on top of the triangle, a small dome. When asked by SPI how large this triangular -shaped object was, she replied that if she held her hand out in front of her this object would still be bigger then her hand!

After a few moments, the object slowly and gradually moved or 'drifted' away. The feelings of all the

witnesses were of amazement. They knew that what they had been looking at was not a normal man-made object. It proceeded to move away from them with only the faint red lights showing. At this point, Mary decided on the spur of the moment, to wave at this 'thing', and she was most surprised when this object flashed three times to them! She reckons that the total duration of this incident was around five minutes, and further stated that the corners of the triangular-shaped object were more rounded than pointed.

With the object now gone, they decided to get back into their car and continue on with their journey to collect a jar of coffee. It was on the their return journey that they wondered if they would see this strange object again. No sooner had they thought about this when the same, or similar object was sighted in the sky, only this time it was travelling quickly in their direction. So quickly was this object coming towards them, that Mary's young son Peter started to cry, thinking perhaps that this object might hit their car. No sooner had Peter started to cry, than this strange object shot back the way it came and was lost to view in seconds.

BUT MORE WAS TO COME!

Another purchase that Mary had made in this local shop, apart from her coffee, was a UFO magazine which contained the phone number of Larry Dean, an investigator with the research group SKYSEARCH. She left a message on his answer phone, stating that if there were any UFO investigators in her area, to get them out quickly, for something strange was going on. After making the phone call, they then related their strange sighting to Mary's friend's daughter Susan, aged 15. Susan was very sceptical and thought this was just one big wind-up. However, after a bit of persuasion, it was decided to once more go back outside and see if they could still see this object, never for one moment thinking that they would.

Mary said to SPI that usually these things are only seen once in a lifetime and she wasn't really prepared for what transpired next. But nonetheless, they all agreed (including young Peter who had earlier been crying) to go out and see if they could see it.

IT CAN'T BE, CAN IT?

Travelling out in the direction of their earlier sighting, they did not see the same object again, but what they did see was what looked like stars sparkling in the night sky but only much, much lower. "There were hundreds of them," she said.. She couldn't for the life of her fathom out what they were, but they were beautiful. It was at this point that things started to get 'strange' and the following information may prove, at least to the hard nosed sceptic, difficult to believe. But this is what they said happened next.

All four witnesses were startled to see a tremendously bright, white light on the ground beside a group of trees which were at the other side of a ploughed field. Their initial thought was that this might be a bright security light to a building. However they soon noticed a bright glow over some trees, an immense bright blue glow which actually shone up into the dark night sky. They likened it to a bright searchlight as it continued its spinning movements up and out of this grouped range of trees. In an effort to get close to this amazing spectacle, they decided to get back into the car and travel down a little back road. This they did, and they continued to view the strange spectacle. A sense of non-reality was in the air, when suddenly the bright, blue, spinning light was joined by other bright lights, red and green. Mary likened them this time to a laser light show. "They really were lovely," she said. "We were all moved to tears by them." It was at this point that events took a dramatic turn, for whilst they were all captivated by these spinning lights, Mary suddenly became aware of 'figures' silhouetted in these lights, small grey figures

who were running around and appeared to be very busy picking up what looked like boxes or cubes, and also cylinders or canisters. Further back in the woods, she said that she saw some form of triangular 'structure' out of which these small beings' were coming and going. But what really surprised Mary the most was the sight of a very large 'being' who was a different colour from the rest. The 'being', she said, was a sort of tan brown. 'He' was standing a short distance away from the rest of these 'beings', as if he were somehow in charge - this she strongly felt.

Indeed at one point, the 'large being' actually stretched down towards the ground and opened his right hand to something', stood up, moved back into the trees a bit, then took up the same position as before. In the sky around this amazing spectacle, were hundreds of these small star like 'things' which were just hanging in the sky. Suddenly a bright beam of light shone down from the sky and illuminated the road in front of them.

Mary related to SPI, that as soon as this light beam hit the ground, her memory of events became sketchy, but she believes that they all took a fright to this light, and jumped back into the car and headed off to her friend's house. Indeed this is what did happen (at some point!). It was at her friends house that she decided to phone Larry Dean again and inform him about what had happened. Larry was home and suggested to Mary that she contact Malcolm Robinson of SPI, he then gave out the number but unfortunately when Mary tried it, she found much to her disappointment that the line was discontinued (Malcolm Robinson had moved house). She again phoned Larry, who this time put her in touch with Tony Dodd of UFO MAGAZINE

THE THIRD SIGHTING.

It was at Jane's house that Mary spoke to Jane's husband about what had transpired. Unfortunately he had

to go to work, but offered them the use of his binoculars. With these, the intrepid witnesses decided once more to go out into the dark night and see if there was any more evidence of these strange beings. One would imagine any other witnesses as being too frightened to again venture out into the night, but curiosity was the major factor here and although slightly fearful they had just had to find out more. Would they see any more or would the area be as dark as it usually was on a crisp September evening?

Well they didn't have to wait long. As they travelled in the direction of the earlier sighting, they again saw many of those strange star shapes in the sky. Also observed near a transmitter on a hill was another immensely bright, white light which was flashing in a sequence of three! They continued on with their journey and this flashing light was lost to view. At this point Mary started to become more alarmed. She felt that as these narrow country roads, she didn't really want to get trapped here.

The excitement of the initial events was now changing to fear, but she didn't want to show this in front of the others.

They stopped the car and proceeded to look up into the night sky with borrowed binoculars. Jane, who was at this point holding the binoculars, thought she was looking at a star. Mary replied that "this was not a star" and quickly took the binoculars from her friend and directed them to the object. Mary stated to SPI that what she had seen resembled a 'squashed ball', elongated from top to bottom. It was a hot, fiery orange colour with big irregular indentations in it. "It looked really shimmery", she said, "as if it was giving off energy." "This thing", she said "wasn't on the ground, but it was near the ground".

Near the base of this 'squashed ball' was something like a wiggly long, oval black spot. It was moving slowly and was tilting on its axis. To the right of that, and all around, was a

small orangey light, very round and very small.

The scene once more changed, and they again all witnessed these 'small beings' in the woods, whom seemed to be supervised somehow by the tall brown being. SPI asked Mary how tall she thought this 'being' was, and she replied, "Oh, at least half the size of the trees"!!

The time of this third visit was roughly around 11.30pm, and during all of these observations, no noise at all could be heard, except when Mary directed the binoculars on to that strange 'squashed ball.' Then she thought that she heard a crackle, something like an electrical crackle. Another unusual statement that Mary relayed to SPI, was that after using the binoculars to view these strange sights, she could see just as well without them. She can't for the life of her understand how, because she said that these binoculars were so bad that it was a wonder at all you could see anything out of them.

SPI asked Mary if she saw what could be termed fingers on any of these beings' to which she replied, "No" but went on to say that this large brown tanned being had very large bulbous head with a very flat face. When we asked Mary about how these smaller 'beings' moved in the woods as they carried these boxes, she stated that they moved just like any normal person would move. "They were bending at the waist". - very naturally. There was no struggle as these 'beings' lifted the boxes and cylinders. They were lifting them quite easily.

The cylinders or canisters, Mary went on to say, were being carried by these small being lengthwise in their arms. No markings could be discerned on any of the boxes or cylinders. Susan and Peter, daughter and son of both women, also stated that they could see these strange 'beings' in the woods close up, just as well as if they were almost there, an effect they should not have experienced at that distance!

THEY ARE COMING OUT OF THE WOODS.

However the most frightening part of the whole night was to come on this third visit, for whilst they were all again looking at this strange spectacle in the woods of lots and lots of small grey 'beings' busily running around, Jane screamed out. "Oh, my God, they are coming out of the woods. There is a mist coming towards us. Oh my God there is a cocoon. There are hundreds of them, and they are in these things." Susan also screamed, "They are coming towards us. They are moving so fast." Mary was alarmed by now becoming increasingly alarmed, and she couldn't understand how it was so light at the edge of this field. She could even see the straw bale which she wouldn't normally have seen, had it been pitch dark. The next sensation or impression that Mary had, was of these huge straw bales crowding across the road from them, and she could sense a being at the window. At this point Mary's friend said "Let's get the hell out of here," followed by Susan who shouted, "There is one standing grinning at me."

Mary then slammed the car into first gear, then second and third and soon they realised that she was doing 55 miles per hour, at which point she thought it better to slow down as she didn't want to end up losing control of the car. The other passengers in the car looked back out of the rear window and claimed that the whole field 'lit up' in an enormous blue flash. They eventually arrived back at Jane's house and stayed up most of the night extremely shocked and amazed.

FURTHER RECOLLECTIONS.

i (Malcolm Robinson) asked Mary about this mist coming towards her car just before they fled, and she told me that she herself didn't see this mist, but her friend described it as

looking very fibrous, like a cocoon, and all these small 'beings' were being carried in it towards their car, their legs never moving. The orange light that they all saw earlier also contained 'beings', although Mary claims that surprisingly she didn't see them, but all the others did. SPI ascertained that they arrived back at Jane's house roughly around 00.30am. Mary had the distinct impression that she had had watched this amazing spectacle for much longer than the actual time that had transpired, indeed on one occasion whilst sitting in the car and watching all these small beings moving around in the woods, she felt the distinct impression that (although she was in a sitting position in the drivers seat), she was being pushed back into a lying position, with someone or something holding her head. She didn't tell mention this sensation to the others, for she didn't want to alarm them.

UNUSUAL MARKINGS ON THE WITNESSES BODIES.

She said that researcher Tony Dodd from UFO MAGAZINE had suggested that she look out unusual marks. That first day as far as she knew, she had none. It was a few days after that when she learned about her friend's daughter, Susan. She had found a strange mark on her shoulder, "as if the blood had been sucked through the skin". This mark resembled two small vertical bars, side by side, separated only by a small space. Jane, Mary's friend, ended up initially with two marks on her body, one was on her right buttock, like a very pale brown birth mark, and the other one was found underneath her right breast on her ribs.

Mary informed SPI that although she hadn't noticed any marks on her body, she was getting extreme discomfort from her arm, at the top where it joins the body (right shoulder). There was no visible mark, but it was very painful to touch. Her son Peter had no marks at all.

A few days later, Jane found another mark which appeared on her right shoulder. This consisted of a brown discolouration, blotchy and irregular around the edges. Susan, Jane's daughter, then found another mark, this time on her right shoulder. It was about 4 inches long and appeared roughly around a week after the main sighting. The week after the event (Monday the 30th), Jane found on the top of her right thigh, an immense bruise, a very colourful bruise. SPI asked Mary if she or the others had experienced any headaches or strange tastes in their mouths after the incident. She replied they had not, but individually they were all very stressed out by the whole incident.

THE INCIDENT IN THE BATHROOM.

On Sunday the 20th of October (a month after the sighting), one of Mary's friends, along with her son, came to visit. She was leaving her son with Mary as she was going away on a weekend visit. Soon her son and young Peter were playing happily in his bedroom. However things were soon to change, for a short while later as Peter looked out of his bedroom window, he was surprised to see a small 'white being' with lots of teeth, looking straight at him. This 'being' was free floating and was not standing on top of the kitchen roof. He was too small for this. After a few moments, the 'being' just simply floated straight upwards with ease and was gone in seconds. According to Peter, his friend also saw this strange 'being'. Later on that same night, Mary was on the phone to Garry Wood, a researcher and himself UFO Experienter. Just prior to the phone call, Mary had run a bath for her son, Mary was explaining to Garry about some recently strange events when all of a sudden she heard her son screaming at the top of his voice, "Mummy Mummy! Come quick, please come quick!" Mary immediately threw the phone down in mid-conversation and dashed up the stairs three at a time.

She entered the bedroom and found her son in some distress. After calming him down, he explained that as he had entered the bathroom, he saw a small white 'being' standing next to the wash hand basin and bath. This 'being' also had a row of teeth, was small and thin and looked very pale. After Peter had screamed, this 'being' just simply vanished!! Mary had to eventually sit outside the bathroom door to let her son have his bath. Indeed, he was still so frightened, that she had to sleep beside her son with the bedroom light left on the whole night.

SPI QUESTION YOUNG PETER.

Obviously when one is dealing with young children in cases as this, one must be very careful. Questions have to be asked gingerly and in a manner understood by the child. I, with the blessing of his mother, then proceeded at this point in our investigation to ask young Peter some questions in regard to these 'beings' that he said he saw. I first of all asked Peter if his first white being that he saw outside his bedroom window whilst he was playing with his friend, could be seen by them both. He replied "Yes". I then asked Peter what exactly did this being look like? Peter replied that he was small, he had an egg-shaped head, with lots of sharp teeth in his mouth. He had an oval-shaped eyes and was very white looking. One thing I found most peculiar in Peter's testimony (apart from the row of jagged teeth) was when Peter referred to seeing an unusual 'flap of skin' which he saw on this 'being' between the elbow and the forearm. This 'being' was also muscular, according to Peter, and there was no sign of any facial hair or boy hair.

GREY BEING AT SCHOOL.

Dealing with case such as this, one sometimes stumbles across pieces of information which can be incredible and hard to believe, but

because information can sound fantastic, does this mean that there is no truth in it? Well what you are now about to read, truly does sound fantastic and one can be forgiven for thinking that it is all a load of nonsense dreamed up in a young child's mind. However, it would be wrong of me to keep this information out of this case just because it sounds ridiculous, so here it is, for what it is worth.

At this point during our interview with Mary, Billy Devlin turned his attention back to her son Peter and proceeded to ask questions about Peter and his school. The following information is taken straight from our audio-taped interview.

Billy Devlin asked, "Has anything happened to you at your school?" Peter replied, "There was a green one, a brown one, and a huge white one at school in the classroom. These ones did not have any teeth. The grey one was holding the top of my pencil, showing me what number to write". Billy then asked "Did you say anything to your pals?" To which Peter replied, "No". Malcolm then asked, "were you frightened?" Peter again replied "No". Malcolm then asked, "Did he speak with you and try to tell you something?" "No," was Peter's reply.

Billy queried, "Why were you not frightened of that one?" Where upon Peter quickly said, "because he was helping me". (Peter's tone of voice was as if we should have known this!) Billy then said, "But surely he didn't appear just holding your pencil?", to which Peter replied, "He came in the same time as me." Garry Wood then said, "Do you think he knew you? Peter answered, "Don't know, he might have known me."

Billy then asked, "Was he with you before you went to school?", to which Peter answered, "He was in my room before I woke up, standing near the bed". Billy went on, "so you got up, got dressed, went downstairs. Did he follow you downstairs?" Peter nodded his head in as a yes motion.

Billy went on, "Was he there when you were eating your breakfast?" Peter replied, "yes, he was still standing".

Garry Wood at this point spoke up and asked, "Did you not go and tell your Mum?", to which he replied, "No, she's pretty scared of these things". Malcolm then asked, "Peter, how tall or short was he?" Peter answered, "He was about the same size as me."

Billy Devlin then came in and said, "So he followed you all through that day and helped you with your homework. Where do he go after that?" Peter then said, "He went through the wall". Billy asked, "Did he not say cheerio or anything before he went?" Peter replied, "No, he just turned round and walked through the wall".

SPI also learned at this point during our discussion with Peter, that this strange 'creature' also shared his taxi on the way to school! 'He' also shared it on the way back! I asked Peter if, by the help of his unseen friend, he had got his sums or school project correct, to which he replied that as yet he didn't know. I also asked Peter if he felt that his 'unseen friend' was helpful in any way. A resounding 'yes' was Peter's reply. SPI learned that this creature had also assisted Peter with another classroom project that day, a project which concerned tissue paper (yellow and orange) to represent flames. The project was concerning the Great Fire of London. Apparently this 'creature' had shown Peter how to cut his tissue shapes.

It was apparent to me, that due to Peter's close proximity to his 'unseen friend', he surely must have been able to observe many features of this small creature, and so I endeavoured to ask him about how many fingers this 'creature' had. Peter replied that he had three on each hand. I then asked if they were long and thin, fat or short, to which he said that they were long and thin and did not have any nails. I then asked Peter if he noticed any lines

on 'his' hand, perhaps near his knuckles. Peter nodded yes. I then asked "Did you notice any veins in his hand?", to which Peter murmured "No." Garry Wood then asked, "Was his 'hand' warm or cold?", to which Peter replied, "cold". Malcolm then asked, "did this small creature have the fold of skin that you observed with another small creature?" Peter replied "No". Billy Devlin then asked, "Was 'he' there when you woke up the next day?" Peter replied in the affirmative.

ALIENS AT THE WINDOW.

If the reader finds the above hard to believe, then some might find the following even harder to swallow. But like I mentioned earlier, SPI must present all the facts, no matter how bizarre they may seem.

It would be wrong to leave certain parts out of a case report purely because some might find them nonsensical. I would also like to point out before I continue, that we must remember that the paranormal is full of reports of young children witnessing all kinds of unusual phenomena. Some have what is termed as imaginary playmates, but as children grow older, they seem to lose this psychic faculty. Was this the case with young Peter? At this point in our interview there was a lull in the conversation. This was broken by young Peter who then said, "Why don't you ask them what you want. There are three of them standing over there". (Peter was pointing towards the living room window.) Both Billy Devlin and I, as well as Garry Wood, immediately turned our heads in the direction in which Peter was pointing. Whilst doing so we also grabbed our cameras. Sadly although we were all looking intently, we didn't see a thing. Nonetheless, both Billy and I took many photographs of this area. I asked Peter what they were doing, what they saying to which he replied, "They are just looking. I think they have been with me all my life. I've seen shimmering all my life." Billy

then asked, "How do you know they are aliens?", to which Peter replied, "Because they look like them", at which Billy continued, "Like aliens in the magazines and books?" "Yes" replied Peter. At this point I asked Peter to point again to where these three 'aliens' were standing. When he did so, both Billy and I moved right into where they were located, again taking further photographs. Peter said that he sometimes feel cold as he 'walked through them'. However, I never felt anything as I moved my body in and around where Peter said these three aliens were standing. Billy had taken several Polaroid photographs of this spot, but nothing unusual had come up on them. I asked Peter what was happening now, now that we were more or less standing amongst them, and he mentioned that he could see a series of white zig-zag lines in the area where these aliens were standing (again unseen by the rest of us). Malcolm then asked Peter if they could move Billy's pen for instance? Peter replied "I don't know. You might want to ask them yourself"! I laughed, but then said, "If there is anybody here with us, could they please move this pen (referring to Billy's pen in front of me). I then jokingly said, "I'll be the first out of this room if the pen moves." The pen didn't move.

At this point in the proceedings, I was intently looking at Mary to see if she was perhaps in embarrassment at her son saying that he could see 'three aliens' in her living room. However her face was impassive. Indeed I asked her if she could see anything in front of the living room window. She replied that all she could see was a shimmering effect. She knew that if she concentrated hard enough, these 'creatures' would come through, but she didn't want this. She has also seen this shimmering effect on a number of other occasions since the stated event. She likens it to a heat haze, that shimmering effect that you see above a road on a hot sunny day. SPI also learned that the night Mary had stayed with her friend, (the night of the incident), Mary kept sitting up in bed and throwing off the the top

quilt from the bed. This went on for around twenty minutes to half an hour. Mary then explained to SPI that the muscle on her right arm was very painful, and was very swollen some days after the incident.

STRANGE DREAMS.

Malcolm then asked Mary if she had had any strange dreams after the incident, to which she replied that there had been one or two, some with sexual overtones. She remembers walking through various corridors, where upon she saw a black door. She was being accompanied by a 'male' person. There was a short corridor and a marble sort of floor, and there were black doors and silvery walls. She got to the end and saw a ladder which she proceeded to climb. This led her out through a hatch, where she saw an outdoor scene, which she describes as a grassy hill or bank. A 'saucer' was sitting on the grass, which was odd she thought. Then she had the impression of a 'male' person doing something to her neck. This male person explained that she might experience a very strange sensation. Mary further explained to SPI that she had strange dreams like this all her life! Mary also said, that a few days after her UFO sighting, she dreamt that she was on-board a 'craft'. She was unsure if it was a real dream or bits and pieces of fragmented memory of a real event. She dreamt that she was in a room, a white room, and there were about half a dozen of these little grey ones in there. She thought she saw a black cupboard and bench in there. The roof appeared a darker grey, and got lighter on the walls. She also saw a large chair, like an office chair without the arms, and there was a brown creature sitting in it. This brown 'creature' turned to face Mary, and all the little ones were in front of her. She then said that she went over to the brown one and started feeling his arms. Mary's friends Jane said that she could also recall being in this craft, so Mary explained to SPI

that she had spoken to her friend and asked her if the 'creature's arms' felt rough and warm, to which her friend said, "You were definitely in the craft". Mary said that this creature's arm felt very textured and looked very leathery.

ANOTHER TRIANGLE SIGHTING.

Mary also informed SPI that she again saw the 'black triangle' a week before our interview. She was going to visit a friend (Sharon Coul). The object was hovering above a field near Kennoway. She was at a higher vantage point so therefore this triangle was actually below her. She said that it displayed two big white front lights and also a flashing red light. It was only when she continued driving into town, that she began to lose sight of the object, although for a short time she said that she could see it between some buildings.

Mary explained to SPI that she felt very nervous staying alone in the house. She is aware of things around her, especially this "shimmering", but she deliberately ignores it. On one occasion though, she decided to let this shimmering effect develop, and she said that she saw one of the 'faces' (typical grey alien face) come straight towards her, at which point she blanked it out. She also informed SPI that she sometimes see something out of the corner of her eye, but when looking straight at it, it disappears.

Mary went on to inform SPI that in her house, she believes she has a ghost of a dog which sometimes runs by her (the family don't own a dog). A few weeks prior to our visit the family heard the sounds of this dog.

The family cat shot out of the kitchen with eyes as wide as saucers and it's tail all bristling out. Both Mary and her husband went into the kitchen, where they were both amazed to hear the sound of 'something lapping out of the cat's water dish! Nothing could be seen.

CATS AND ALIENS!!

SPI asked Peter if the cats reacted to this ghostly dog and also these 'creatures'. Did they hiss for instance? Peter replied that one of their two cats did indeed hiss at them, whilst the other cat was quite content when being struck by one of these small 'creatures'.

Mary then explained that Domino, one of their cats, a little white one, sometimes went on the defensive on the occasions that she had seen this shimmering effect. Domino would react by hissing and spitting at the "shimmering". One question that Malcolm posed to Mary was a question about of balls of light in her bedroom, which are sometimes seen by witnesses either prior to, or after a UFO event. Had she seen any of these, I asked? She replied that she had not.

After talking with Mary about these balls of light which she said that she hadn't experienced, she did recount the time when strange blue lights swooped into her bedroom. She initially thought it must be emergency vehicles outside, like an ambulance or police car, but on looking out of the window, no emergency vehicles were to be seen. These blue beams, Mary said were coming into her bedroom from above and not from below (Mary's bedroom was on the second floor). Malcolm Robinson asked, "How thick were these blue beams that shot into your bedroom. Were they as thick as your arm?" "Oh yes," she replied. These blue beams were straight and did not bend as they came into the room." Mary remembers feeling very uneasy about these blue beams and did what she felt was the correct action, she dived under the covers! This all happened when Mary stayed in a house in the village of Cupar in Fife back in 1986.

On another occasion when she stayed in Cupar, she had another unpleasant experience. One day as she went out to collect her washing, she felt a strange presence. She

described it as 'horrendous', as if it were crushing her. She has never felt anything so malevolent in her life. By the time she had collected her washing and moved back indoors, she was so frightened that she dropped to her knees with the tears just streaming down her face. It took all her time to lock the door. Her neighbours later told her that her was a strange 'presence', 'out the back'. There was nothing tangible that Mary could see, but she related that it was the sheer malevolence of this episode that completely terrified her. It was a feeling of complete and utter hatred.

Mary then explained to SPI that she has noticed her son Peter had become more psychically aware over the past few months. And she remembers her son telling her that he had seen a ghost when he was younger, a white lady, seen in a cupboard in his room. He had been playing on his bedroom floor said Mary, when all of a sudden a mist drifted from beneath this cupboard then developed into the form of a white lady. Mary also told the story that when Peter was younger, he had said to her that he could see a 'little man' in his room. Mary heard the sound of 'someone' or 'something' walking up the stairs., but upon looking, nothing could be seen. On one occasion she had a cousin stay over, who, during the night, became very scared as he heard 'someone' moving about.

MORE QUESTIONS, MORE ANSWERS.

Garry Wood asked Mary about her friend Jane, who was with her on the night in question. "How was she taking it? "Mary responded by saying that Jane was taking it better than she, that she had seen an awful lot more.

Garry went on, "When you were looking at the UFO on the 23rd, did you feel you were getting any communication from it?" Mary replied that she never got anything, she was just completely stunned.

At this point in the proceedings, I, Malcolm Robinson asked Mary, "Do you think that what you saw is the true image of these beings, or do you think that it is something else?" She replied that she didn't know. She felt that they were collecting things, taking samples. She then went on to say that at one of the sites where they saw these 'beings' (when they went back at a later date) there was a huge rock, like something that had come out of a stone building house. This had been moved from one area to another, very cleanly. And it was near this that Mary said that they had found an 'igloo thing'.

THE IGLOO.

Mary said that when she went back to this are, not only did she see this large rock, but she found an 'igloo thing', which was about three feet in height and was about the same diameter. It was beautifully constructed. Malcolm asked her if perhaps this might have been built by kids. She replied that it was really complex, really perfect. It was made out of weeds and grasses and things, but she couldn't recall seeing any twigs. This left her totally gobsmacked.

STRANGE SMELL.

Mary then informed SPI about a strange smell that pervaded the family home some days after her UFO encounter.

It was a horrible acrid smell which was all over the house. It smelt like burnt paper she said.

MONDAY 30TH SEPTEMBER 1996.

Mary related to SPI about a strange event that had occurred on Monday the 30th of September (about the week after the initial big sighting). She said that she was driving up to

her home when she observed what she termed as a star which came shooting over from the right and curved round, almost as though it was keeping in parallel with her. She said that she then lost sight of it in the trees. She quickly went indoors and went upstairs and looked out of a window. She then caught sight of it again as it rose above tree level, and it just sat there twinkling. After a few minutes, a little red light flew across and kept a certain distance from it, then the two of them moved together in tandem. She then lost sight of the red one, but continued to see the white one twinkling away, and then it started flashing in sequences of three (her son Peter was also witness to this). It was at this point that she started to see something flash above her head. She looked up, and at the top of her bedroom window, she saw what she described as a "thing" come, oh so slowly over the top of her house. To start off with, she said that it had two white lights that were flashing on and off at the same time, and the object just kept coming and coming. It was shaped like a cone, and it had a big white light in the centre, a small red light elsewhere, another white light and possibly a further white light near the end of this cone, although she is not really sure about this. To the underside of this object, she described something like lumps or shapes which were attached. It reminded her of those small structures that she had seen on some of the "Star Wars" craft in the film of the same name. This was an amazing spectacle in a dark starry sky. The object kept coming slowly over the roof of her house and she noticed a further two more lights, the whole thing was now shaped like a big rectangle. The four white lights on the corners were all flashing on and off at the same time. Eventually the object cleared her roof and headed off in the same direction of where she had earlier seen that small red light, and then out in the direction of the North Sea. Mary went on to say that later that evening other aircraft showed up in the vicinity, but these, she said, were all normal aircraft. But it was the feeling of peace that she got whilst looking

at the strange 'craft' that she has never been able to describe. She felt wonderfully happy, very calm and ecstatic. It was a tremendous feeling to see this object, a feeling which she states words cannot describe.

This feeling of peace stayed with Mary for quite a number of days. The Thursday of that same week, she and her husband saw another shape rise up from behind the trees. It started off with a blue glow, and then it started moving about erratically. Mary stated that this was the first time that she had seen any strange object move erratically. Normally they moved so gracefully.

AIRCRAFT AND HELICOPTERS.

Malcolm Robinson then asked Mary if she had heard any aircraft in the area over the past few weeks she replied "stacks of them." She went on to say that both she and her friend had never known so many night-flying aircraft prior to when they had their sighting. Mary also explained that a neighbour down the road had told her that she had heard the constant noise of aircraft for days. Mary then related the time when she saw a helicopter in the area, not long after her UFO sighting. She said it was during the night, and it was flying nose down without any lights... She didn't see any markings or insignia on it and speculates that it might have been using night vision, as it circled over the valley.

MARY AND HER EARLY YEARS.

Mary related to SPI that when she was growing up she had many nightmares, especially in her mum and dad's house in Auchtermuchty. Then she moved to a cottage in Monefeith (near Dundee) where she had the most horrendous nightmares. Indeed, these nightmares became so bad, that her Mum had to wake her up as she was almost clawing her way through the bedroom walls. Growing up, Mary

showed an interest in psychic and spiritual matters. She has read Whitley Streiber's two books, *Communion* and *Transformation*. Three years ago (1994) she stated a subscription to *Flying Saucer Review*. She also likes the *Fortean Times* magazine (a journal of strange phenomena). She was quick to point out however, that reading all these magazines and books had nothing at all to do with her own and her friend's UFO sighting. "This really did happen," she said. "I am not making it up".

Mary went on to discuss her friend Sharon Coul. "Sharon," Mary said, "is a good friend to talk to". She went on to say that she had stayed with Sharon one particular night, and that night they could both feel the 'presences' in the room. The following morning as both she and Sharon were having a cup of tea, the electricity went off, the main switch had been switched off. They were both perplexed as to how this could have happened.

OTHER POINTS THAT CAME OUT OF SPI'S INVESTIGATION.

1. Mary refused SPI's help of hypnotherapy in an effort to see if there was any more hidden information. We did inform her about the pitfalls of hypnosis and said to her that it wasn't the best of tools. However, we did say the final decision on whether to use it or not would be hers. Mary felt that she didn't want to explore this avenue. However, she did accept counselling, and SPI put her in touch with an expert and qualified counsellor. (Not Quest International, I hasten to add. UFO Magazine said it was they who had got the witness a counsellor. Not so, it was SPI.)
2. Sadly Mary refused to let SPI have any access to any of her son's drawings. He had drawn a lot on our visit, of the craft that he saw, and also the 'beings' that he saw. None of this was given over to SPI.

3. UFO sighting account forms were left for the witness and her son. She promised to complete these and return them, but we never received these forms back.

4. Essentially SPI have no written confirmation or drawings by any of the witnesses. Thankfully we do have an audio recording of our visit that night.

5. Mary explained to SPI that when she was sitting in the car looking at all these 'small beings' in the woods, she experienced the sensation that something was standing outside, near the car. She then experienced the feeling of someone holding or forcing her head back and felt as if she was lying on her side, but she told SPI that she was in a sitting position in the car. She describes this episode as "really bizarre".

6. The witnesses now feel that they have told their story, and they no longer wish to discuss it anymore. They now want peace and quiet. This is a great pity but a decision we must respect. There are indeed a number of unanswered questions, points we would like to clear up, but due to the witnesses refusing any further cooperation, we sadly cannot answer those points.

7. Mary has now left her Fife home, and now lives with her husband and family in Wales. This move of house was planned prior to those UFO events and not because of them.

HOW SPI LEARNED ABOUT THIS CASE.

We learned about this case from Garry Wood, a UFO abductee from Edinburgh who has assisted SPI a great deal with cases over the years. Garry's own case is incredible in itself, and we thank him for letting us know about this one.

Garry informed Malcolm Robinson of some of the information that he had obtained through a lady called Sharon Coul who lived in the Fife area. Sharon was a friend of one of

the witnesses to this case and had spoken to Garry about it. Garry had also informed me that QUEST INTERNATIONAL were now on the case and that Tony Dodd was the main investigator dealing with it. I quickly phoned Tony Dodd and asked him if he could tell me anything about the case. Indeed I wanted to know as much as possible. Unfortunately Tony refused to tell me anything about it, due, he said, to witness confidentiality, which I admit I had no qualms about. This I respect. Indeed, we at SPI would also follow the same guidelines should a similar case come about (if the witness requested it)! I thanked Tony for his help and asked him to let me know as much as possible about this case on completion of his study.

Tony had informed me that he had put a scottish member of QUEST on to this case, One Brian Rooney. My next call was to Sharon Coul herself, Garry's informant. Sharon was very helpful, but could not put me in direct contact with her friend who had experienced this strange event as she was still very traumatised. However, she did say that she would telephone her friend, tell her all about me, and see if she would perhaps call me direct. I thanked her for this and put down the received a phone call from one Mary Morrison (pseudonym), Sharon's friend and UFO witness. She was on the phone to me for a very long time indeed, explaining all about what had happened. As she continued recounting her experiences to me, with every sentence it was becoming apparent that this case was not only very big, but could possibly be the biggest case of it's kind ever to have occurred in Scotland, perhaps even surpassing the Garry Wood A70 case. Mary told me about the marks on the ground, small grey 'aliens', cocoons, 'creatures' in her home, and a whole host of strange and puzzling events. By the time she had finished talking with me, it would be fair to say that I myself was more than a little shocked. I was honestly stunned by this startling information. I promised Mary that SPI would help her as much as we could, and would

ensure a proper and thorough investigation. Her reply was that she would be happy to continue talking with SPI, but more than anything, she desired counselling. She just had to talk to someone, a professional person with a medical background, about what she had seen, and indeed was still seeing(!) I promised Mary that I would find her someone to go to, and true to my word, I put her in touch with a professional counsellor (name on SPI's files.)

STEPS TAKEN BY SPI TO OBTAIN MORE INFORMATION TO HELP WITH THIS CASE.

I again contacted Tony Dodd and informed him that I now had the telephone number of Mary Morrison, one of the witnesses. He was most surprised at this as he was sure that she wouldn't talk to anyone else, but I explained that she really needed help and was prepared to talk to anyone could offer this. I then asked Tony to assist SPI, by giving us all the information he currently had, including any photographs or drawings. He replied that he couldn't do so at the moment do so at the moment as all his material was required to assist in the writing up of a case report on this event for UFO MAGAZINE. The published report about this incident has since come out, but as yet SPI has not received any information which could assist us in compiling our own report, and also in continuing our own investigations.

I then telephoned a local police station in the area and requested information about any members of the public that might have phoned their station on the night of the incident, perhaps relating their own sighting. After checking his records, he informed me that no members of the public had phoned their station, and he was not aware of any such reports over the past several months. I left him with my name and address to contact me should become aware of any such witnesses. I then wrote a letter detailing my request to the

main police office in nearby Glenrothes. In their reply (see appendix), they stated that they were not aware of any UFO incidents in the area.

Letters were also sent to the various airports in Scotland asking them if they had any air-traffic in the area of the night in question. Calls received from these airports stated that they had no air-traffic in my specified area. I await written confirmation from the airports to this effect.

A letter to the British Ministry of Defence was also sent at the time of this report, but no reply has been received. Other lines of enquiry are being looked into, and reports of such enquiries can be found in our appendix section.

LETTERS TO OTHER SCOTTISH UFOLOGISTS.

Because this was proving to be such a big case, I took the step of contacting four other Scottish Ufologists in order to ask them if their own group has any reports concerning UFO activity in or around the date in question. These Ufologists were Ron Halliday of the Scottish Earth Mystery Research Group. Ron had no case near our date. George Niedzweidz of Eyemouth near Berwick also said that he had none. John Jenkins of Pennicuik, West Lothian submitted a case, but this was not near our own specified date. David Colman of Lothian Borders research informed SPI that he was aware of two cases near the date. This information is currently being looked into by SPI.

INVESTIGATION OF THE AREA.

Due to work commitments by not only myself, but Billy Devlin and Iain Connon, we were unable to quickly go to the specified areas where the events took place. However, Garry Wood has visited these areas on several occasions and a full and comprehensive account of his visits

will be given at a later date. SPI finally paid a visit to the three specified area in January 1997. Malcolm Robinson, Billy Devlin, Stephen Black and channeller Graham Wylie went over the areas in question, but no physical ground traces were found or noticed. However we did find a fibrous white substance at various areas which are now concluded to be a normal product of the area, though we await the tests done by Quest International to confirm this.

Channeller Graham Wylie felt (as we did) a negative feeling at one location. Later Graham performed a "cleansing ceremony" at one site and he now feels that these 'beings won't be back!! SPI aim to to return to these locations on further dates to go over the ground at great length, or to ensure that we haven't missed anything.

CONCLUDING REMARKS BY MALCOLM ROBINSON.

Without a shadow of doubt, this case is truly puzzling, and has all the elements of what must be the biggest UFO event ever to have occurred in Scotland(perhaps even surpassing the A70 UFO and abduction which occurred to Garry Wood and Colin Wright). Sadly in the Fife case, the witnesses have refrained from giving any more interviews to UFO investigators, which is a great shame, but something we must respect. This does not mean to say that the case is false or did not happen. The witnesses have told their story and would now rather forget it. I'm sure the sceptics will love this!!

Linda Moulton Howe, the cattle mutilation and abduction expert, phoned Malcolm Robinson from America and was speaking about this case for just under two hours. She gave SPI a few tips about how to go about dealing with a case as big as this, to which SPI thanked her. Malcolm, did an interview with the Herald, one of Scotland's major Newspapers. Upon publication, many other newspapers phoned

Malcolm and asked him to do an interview. The Fife Free Press, one of several papers in the Fife area, did an extremely large piece about this case. Thankfully they placed his phone number and address in the article. This brought forward several other witnesses who have also seen strange triangular craft in the Fife skies. Sadly, no one phoned who saw anything on the height in question.

One witness wrote to Mr Robinson and informed him that she saw two air force jets pursuing a dull grey disk shaped object in the sky!!

Investigations are still ongoing into this most impressive case, and we feel that this case should be brought to your attention. Ufology is for the people, and people should become more aware of what's going on, and in this regard, we submit this case for your attention. We hope you find it of interest.

Malcolm Robinson, Alloa, Central Scotland, February 1997. (c) Strange Phenomena Investigations. Strange Phenomena Investigations Researcher Malcolm Robinson, 29 Kent Road, Alloa, Clackmannanshire, Scotland. FK10 2JN. TEL: 01259 210714.

ADDENDUM. SPI would like to thank the following people for their welcomed help in the investigation of this case. Garry Wood from Edinburgh, Sharon Could from Methil (Fife), Graham Wylie and Stephen Black from Dundee.

EDITOR'S NOTES.

My thanks go to Malcolm for allowing me to reprint this article and his continual support for Dragon Watch.

KEY TO CONSCIOUSNESS: QUANTUM-GRAVITATION.

The brain of matter may be a conscious entity or not. What this new approach shows, however, is that a primary consciousness lies at a sub quantum level of reality: in the invisible! Mathematics throws up it's fine structure. This created the universe of matter out of its own substance, by the clever use of vibrations, (using quantum waves) in order to provide an environment of mind.

SUMMARY AND AUTHOR'S BACKGROUND.

The author began as a research officer at the National Gas Turbine Establishment helping to develop the jet engine. The rest of his career was spent as a chartered engineer and academic lecturing in the fields of thermodynamics and fluid mechanics, first at the University of Liverpool and finally at the University of Bath.

After retirement his Newtonian-based disciplines formed the ideal springboard for tackling unresolved problems in physics by looking at them from a new angle. The study was triggered from reading about the "Big Bang", regarded by cosmologists as the standard model describing how the universe began: as an accident in which matter arose so incredibly fine-tuned that biological life-forms could subsequently evolve.

The theory seemed unacceptable because this explosion depended upon a negative pressure - which violated common sense (as detailed in the appendix).

Other unacceptable features were discovered from a study of mathematical texts and so a fresh start needed to be made; beginning with a new approach to find a solution to the vexed question of quantum gravitation.

As a spin-off it was found that many aspects of the so-called "paranormal" could be explained as real effects

coming now within the orbit of physics. This document summarises the exciting end result.

GRAND UNIFICATION? A PROBLEM.

How could gravitation have any possible connection with consciousness? The answers, put simply, is "Everything!" It is not reasonable, as most people would agree, to consider either subject without reference to quantum theory. The latter, though immensely powerful and accurate in it's mathematical formulas, is clearly incomplete. It cannot yet bring gravitation into line. At its core is also the unresolved enigma called "wave-particle duality". The minute components of atoms, the "sub-atomic particles", sometimes like little billiard balls bouncing off one another but at other times they act as if they are waves occupying extended volumes of space.

Quantum theory, though intimately structured on this apparent anomaly, is quite unable to state what these waves are: whether real or merely abstract. It says they permit all possible outcomes to exist in some kind of limbo state as unresolved "wave-functions" until these are "collapsed into particles" by the act of observation to yield a single reality. So quantum theory already infers the existence of a consciousness generating the illusion of a world built of matter. Bohm(1) suggests that a substream exists providing "Implicate Order". Professor Penrose(2) discusses computing systems and hints that something analogous could be driving the universe. Quantum theory as it stands, however, is unable to provide a mechanism to explain how its waves arise as well as being unable to say whether they are real or not.

Unfortunately, history has pushed the scientific community into the total rejection of matters deemed "paranormal": they appear to regard them as a threat to the basic laws of

BY RON PEARSON.

their discipline. Indeed, this attitude was highlighted by the eminent physicist, Professor John Wheeler, of Princeton University. An engineer, Professor John, Dean of the Faculty of Engineering of the same university, had just been demoted to Associate because he had dared to carry out research into a forbidden field: psycho-kinesis. Jahn had quite reasonably justified his work by stating that, if the mind could affect instruments, then engineers needed to know about it. Wheeler, however during the "Heretics" TV series, justified the demotion on the grounds that, if proved true then the whole of physics from Newton onwards would be discredited! He had stated, in an earlier program, that their theories could be not wrong: the mathematics was just too beautiful! Should not the validity of the initial assumptions be regarded as the real criterion? Furthermore are scientists justified in postulating that mind is mere brain function so that biological death is the end?

The entrenched position of established physics may soon be overturned, because its deficiencies can now be rectified as spin-off from a new solution. This offers an explanation for gravitation base on a new development in quantum theory - which is why gravitation is important for our quest. The mathematical logic was published in the proceedings of the Second Scientific Conference on Problems in Space and Time(3) of 1991 and further extended in the proceedings of the Sir Isaac Newton Conference(4) of 1993. It fits the latter to a tee, being based on extensions to Newtonian physics.

To Newton, inertial mass was invariant, corresponding with what we now call "rest mass". However since light falls like matter, yet is pure energy of motion called "kinetic energy", it is clear that kinetic energy and rest mass need to be considered

as made from the same stuff. Hence an object in motion has to be considered as made from a "total energy" which is the arithmetic sum of both constituents. With this extension the main predictions of special relativity, including $E=mc^2$ are paralleled, except that kinetic energy is based on a seemingly "absolute" frame of reference, a feature which Einstein's Special theory of Relativity forbids.

This is a crux issue because its denial supported the discreditment of the "Ether" of Newton, Crookes, Lodge and other leading scientists. It has been postulated early by Christian Huygens as an all pervading medium needed for the propagation of light. Then nearly a century ago Michelson and Morley carried out their famous experiment using an interferometer to determine the absolute speed of light for two mutually perpendicular directions but their results always came out close to zero. Then with the advent of Special Relativity the fate of the Ether seemed sealed for ever. Einstein's main postulate stated that light has the same speed for all observers. This fitted in with the experimental finding but was incompatible with the very existence of an Ether.

Unfortunately this incompatibility extends to any kind of background medium, even the so-called "space" on which quantum theory depends. The latter postulates the existence of a seething mass of "virtual particles" as required for generating the forces of nature. They form a substrate, rather like a gas, so it must have fluid properties - totally unlike the concept of a rigid ether.

If now an observer called "A" is at rest in this fluid, light will be observed propagating relative to the fluid. A fast-moving space-ship will be observed moving through the fluid. However, Special Relativity, demands that an observer "B" in the space-ship, will see the same speed of light as observer "A": it would appear different if, relative to B, light was propagating through a fluid moving past at high speed. This just

has to be the basic reason for a remarkable admission made by Professor Stephen Hawking in his popularisation(5). He said on page 11 that Relativity and Quantum theories are, "known to be inconsistent with each other - they cannot both be correct."

So what is the point of still going on trying to match these two so-called "pillars of twentieth century achievement in physics"? (After more than sixty years of effort!)

Fortunately recent developments to be described, have shown that most of the remarkable mathematics of relativity theory can be retained, even when its basic assumptions have been drastically modified - as required. It will be shown that a background fluid, to be called the "Neuther", has to exist which can satisfy all the apparently conflicting observations just as well as relativity. A quantum-based theory of gravitation now appears, however, which then enables a grand unification of all four forces of Nature to be presented for critical analysis. Such unification has been the "Holy Grail" of physicists for more than half a century, but this solution appears with a bonus: spiritual aspects are predicted as potentially real effects, not just illusions! Furthermore no change is required to any of the mathematics of QED or QCD theories, which describe electromagnetism and the strong nuclear force respectively.

It is worth noting that Richard Milton, writing in the Mensa Magazine dated March 1997, describes the conclusions reached by Paul Dirac, Andre Sakharov, Louis de Broglie and David Bohm: all Nobel Laureates. these famous physicists all pleaded, for a resurrection of the ether as a fluid!

This present theory leads to a solution showing that the neuther is essential, having a complex yet fluid structure and being the only thing which really does exist. As will be shown, it is like a neural network with its own built in power supply. It is capable of acting as a vast memory

complex and has all the ingredients needed for its evolution to a conscious entity. According to the new approach, it is this primary consciousness which structures matter. It does so by the intelligent use of quantum waves of real energy which it generates.

THE THEORY IN A NUTSHELL.

The gravitational theory, from which a start was made, showed that the neuther had to exist rather like a gas of primary particles, the "primaries". They are minute, each being less than 10^{-20} m in diameter. These are the only true particles in existence and behave according to just two fully established conservation laws: those of energy and momentum. No forces of any kind really exist, except those experienced during the collisions of primaries.

The same logic gives similar predictions at the "sub-quantum" level of reality whether based on Special Relativity, Quantum Theory or on Extended Newtonian mechanics. It is hoped this feature will defuse objections which have so far limited publication. The gravitational theory threw up a most important feature: only half of all primaries are built from a positive kind of energy. the other half have to be of a negative kind so that the whole exists in dynamic balance. Without the negative component forces of attraction, like gravitation, cannot be modelled without violation of the law of conservation of momentum.

Before physicists complain that negative energy states were first proposed by Paul Dirac in the 30's and have since been discarded, it is necessary to justify their re-introduction. All objections raised depended on sub-atomic particles, like electrons, being composed entirely of negative energy. In the new formulation none of these exist in anything but dominantly positive states. "Dominantly " because everything exists as a composite of both with an asymmetry causing only a positive excess to be in control of motion: all objections are therefore

made quite irrelevant! The concept of energy is best understood by considering mechanical work. For the positive kind an object of positive energy will react to an applied force by accelerating in the direction of that force. Then positive work is done on the object, being the product of that force and the distance moved. An object made from the negative kind would react by accelerating backwards - in a direction opposed to that of an applied force. The mechanical work done must then be negative because the force is applied opposing the direction of motion. The negative kinetic energy gained, however adds to the negative rest energy which the object originally comprised and so the total negative energy increases as the object speeds up. It therefore forms a perfect symmetry with the energy gain of positive matter accelerated to the same speed. Indeed the symmetry is so perfect it is impossible to say whether our bodies are positive or negative. Hence negative energy, or mass, which are one and the same, look just like the positive kind. We will follow convention and assume the universe is made no difference to the end result. It is only when opposites interact that curious effects appear, as will now be shown.

A mixture of both kinds could mutually annihilate. For example, 10 positive units added to 10 negative units would yield zero:

$$+10 - 10 = 0.$$

Pure creation, however, is represented by the universe case:

$$0 = +10 - 10.$$

Either way the law of conservation of energy is satisfied, with the net energy remaining zero. Some other condition, however must apply for control: to specify which case is applicable in given circumstances. This is provided by the additional need to conserve momentum at each collision of primaries. Momentum, denoted by p , is defined as mass m , multiplied by velocity, v , i.e. $p = mv$. Experience of collisions between objects of like energies has shown that the sum total of momenta, measured in any arbitrary direction, is always the same after any collision

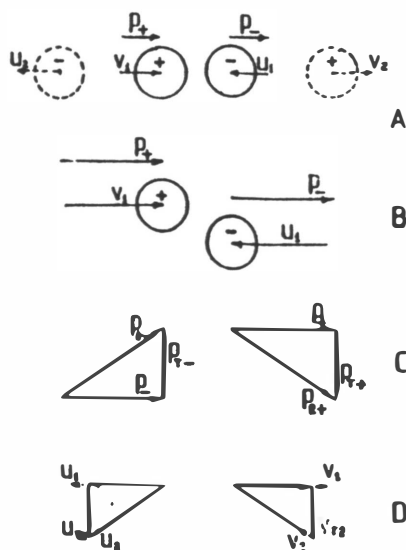

FIG.1 COLLISIONS OF PRIMARIES
 v for velocity +ve. energy
 u for velocity -ve energy

as it was in at the start. This is what is meant by the term, "conservation of momentum". It follows that the same law needs to apply to the collision of opposites. For a positive mass its momentum, represented by an arrow, points in the same direction as the motion. For a negative mass, however, the arrow points backwards! It follows that collision responses between opposites will be very different from those we experience every day.

Let us examine what will happen if a pair of primaries make a head-on collision. Because the negative one has its arrow pointing backwards but is moving in the opposite direction to its partner, both momentum arrows point in the same direction, as illustrated in FIG. 1A. They add up. The primaries will be moving at speeds close to that of light and in this condition their energies are directly proportional to their momenta. Since no momentum can be lost the primaries must pass through each other, both retaining their original energy: neither can suffer any energy loss by the collision.

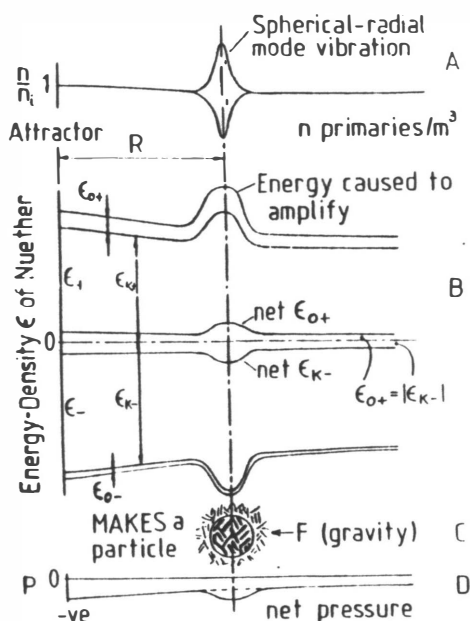

If collision are not head on, as in B, the same "forward" momenta and energies need to be conserved.

Now, however, a sideways scatter is induced, with extra sideways momentum imparted to each in such manner that they mutually chance, as shown in Fig. 1C. It follows that both have a sideways component of velocity imparted in the same direction as shown at D, contrary to what would be expected from, say, the collision of a pair of billiard balls. The important result, however is that the corresponding energy gains add to those which pure-existed. Hence the collision of opposites generally results in each primary gaining energy of its own kind in amounts such that the gains per colliding pair, sum to zero. Repeated collisions will result in growth to a limiting size after which breakup will occur. The results is that primaries breed like opposite sexes, feeding only from the void.

A detailed study, allowing for collisions from all directions and with probabilities of collision proportional to relative velocity, threw up an average gain ratio of 1.18 as shown in the author's book(13). This represents an unimaginably high rate of energy creation, represented by the calculated figure of 10^{75}W/m^3 . This means that if a power unit is assumed equal to the entire heat and light radiated by our sun, then millions of Sun's equivalent is being created at every instant in every cubic millimetre of space!

This is almost cancelled, however by continuous annihilation going on everywhere at the ask me time so that little net creation can be observed. Just enough remains to account or the expansion of the universe. This is because application of the same momentum conservation laws shows, when multiple collisions occur, conditions favouring mutual annihilation appear. Flow cells will develop as all primaries are pushed by the creation going on behind them so that they converge from all directions at common centres as illustrated in FIG. 2A. Here momenta cancel, so permitting energies to mutually squeeze each other out of existence. The cylindrical packing of such cells is favoured over spherical packing

owing to the asymmetries caused by the cup shaped "voids" between cylinders, being smaller than for packed spheres. Because annihilation takes time a compacted mass remains around each centre consisting of energies in the process of mutual annihilation: primaries are arriving at the outside as fast as they are being removed inside. Consequently filaments of annihilation develop which criss-cross in a random packing order, as shown in FIG. 2B. They each form tee-junctions at either end with other filaments.

Junctions can be either open or closed. So by-stable elements have appeared which can act like computer switches - or better still, like the synaptic junctions between neurones of the brain!

This grid like structure would, however, be quite "dead" unless an asymmetry of rest energy existed between opposite primaries. Positives need to have more than negatives. Then to restore balance, negatives need to have the greater kinetic energy. As a result there will be a slight dominance of negative pressure, exactly as required for producing the gravitational force in the manner to be described! The asymmetry also enables open junctions to gain an energy

imbalance by acting like the rectifiers of AC current for the random surges in the surrounding energy creation zones. When subsequently switched to closure, energies will flow and trigger the switching of other junctions. In this way waves of switching action can develop spontaneously, mirroring such effects as alpha-waves in our brains.

Indeed this is all the complete structure is capable of doing; the production of switching waves: making etheric vibrations. Such a neural type network will, however, possess the potential to develop memory and learning capability, just like the experimental versions now being explored by scientists such as Hinton(6). Now the developing theory of "chaos" shows that if a certain potential exists, then ultimately the laws of chance will cause it to develop. So ultimately a machine like intelligence could evolve able to manipulate its spontaneous wave-action to construct purpose.

CREATING A UNIVERSE.

To build sub-atomic particles waves need to be focused. Then the extreme density gradients at the focus will stimulate more collisions of primaries. Higher rates cause increased creation and so density humps will appear in the neuther. These humps serve as the particles we observe. The asymmetry amplifies the positive rest energy and the humps are bound by an amplified negative pressure.

To make atoms, however, these humps need to be organised by control waves in the manner described by Schrodinger. The focusing has to be organised with positions chosen at random but with probabilities highest where constructive interference between control waves is greatest. This implies that electrons must be particle sequences joined end to end in time but not in position. After a short period of focusing at one up to the position is shifted to another place. The previous hump then decays to be replaced by another at the new location. In this way the

electron can appear to jump about at random to fill a spherical volume of space. It will be wave-confined to produce the "orbital" of the atom: it appears to us, however as a fuzzy ball of electrical charge. A real electromagnetic force is not required for such confinement. If electrons are positioned by wave interference patterns, then electric confinement is rendered unnecessary. It is true that the orbital is produced by waves bent by the electrostatic force in the

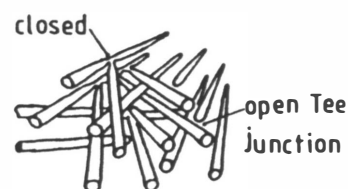

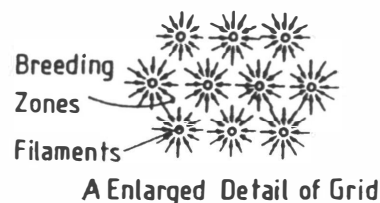

FIG B GRID STRUCTURE

mathematical; derivations, but it is suggested that a similar abstract procedure could be used by the computational abilities of the neuther.

The linear accelerated motion of an electron from a negatively charged sphere may be imagined in order to make the mechanism more understandable. The excess of electrons on the surface of the sphere will cause the computing ability of the neuther to generate wave interference pattern spreading outwards. Humps, representing an electron, will be repeatedly generated at places with increasing separation so that the impression of a single accelerating object will be generated. In fact, at each position, each hump will not need to move at all. The effect of motion will appear rather in the way the illusion of motion is generated on a television screen by the illumination of one pixel after another in sequence. The neuther, however, provides a three dimensional screen of which the moving picture of matter can be

generated. We interpret the motion as the acceleration of a single particle under the action of an electric force caused by the electrons charge interacting with the field. In fact no electric or magnetic force need exist and charge can now be seen as a purely abstract concept! These are illusions generated by the waves. We certainly perceive what appear to be a real forces, but our bodies from part of the three dimensional picture, which according to the principles just described, appears more as a semi-virtual reality than something truly real.

The late and famous, Richard Feynman(7), showed that the situation is more complex then this simple description implies. All manner of interactions form and dissolve again before the final end results appear, some even involving time reversal effects. These are the abstract plans going ahead of real time, suggesting that control waves may also be abstractions; all is generated by the vast neutheric computational power available.

A full treatment (15) shows that a perfect explanation or the enigma called "wave-particle duality" has appeared; it seems entirely free from paradox.

A similar argument can be offered to explain the atomic nucleus and the weak force responsible for radioactive decay. Again, for these three forces, no change in existing mathematical logic is involved: it is just the interpretation which has changed. Only gravitation remains as far unexplained. It appears, however, as a by product of the same mechanism. As the sub-atomic humps are generated by focused waves, the same waves cross the focus to spread out to infinite distance. As they go they combine their effects with waves arising for other humps to stimulate further creation, causing gentle energy density gradients to arise with densities greatest the closest to concentrations of matter. The humps caused by increased energy creation demand an

increased balancing annihilation so that the filaments inside them grow fatter than those outside. It is this differential size, acted on by the net negative pressure gradients which cause the force of gravity. Fig. 3 illustrates the way sub-atomic humps and gravitation are produced in the manner just described.

The theory is quantified in the proceedings of the St. Petersburg Conferences (3) and (4). It predicts the same red-shift and the same perihelion advance as General Relativity, due to inertial mass changes with speed and gravitational potential. Then, due to the density

variation of the neuther, the same doubling of gravitational light deflection and nearly the same "Shapiro Time Delays" are predicted. So two more achievements of General Relativity are paralleled. It is these densities gradients which give the same effects as Einstein's concept of "Curved space time."

But now a puzzle has arisen. In 1964 prior to his experiments, Shapiro(8) quoted the "Schwarzschild Solution" of General Relativity for his expected result and this is "GR" in FIG. 4. This was based on the prediction that light slows as it nears the sun so that on

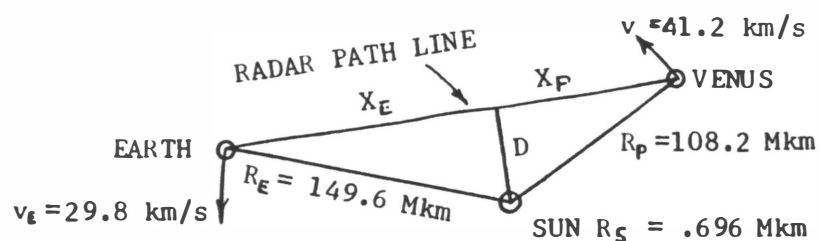

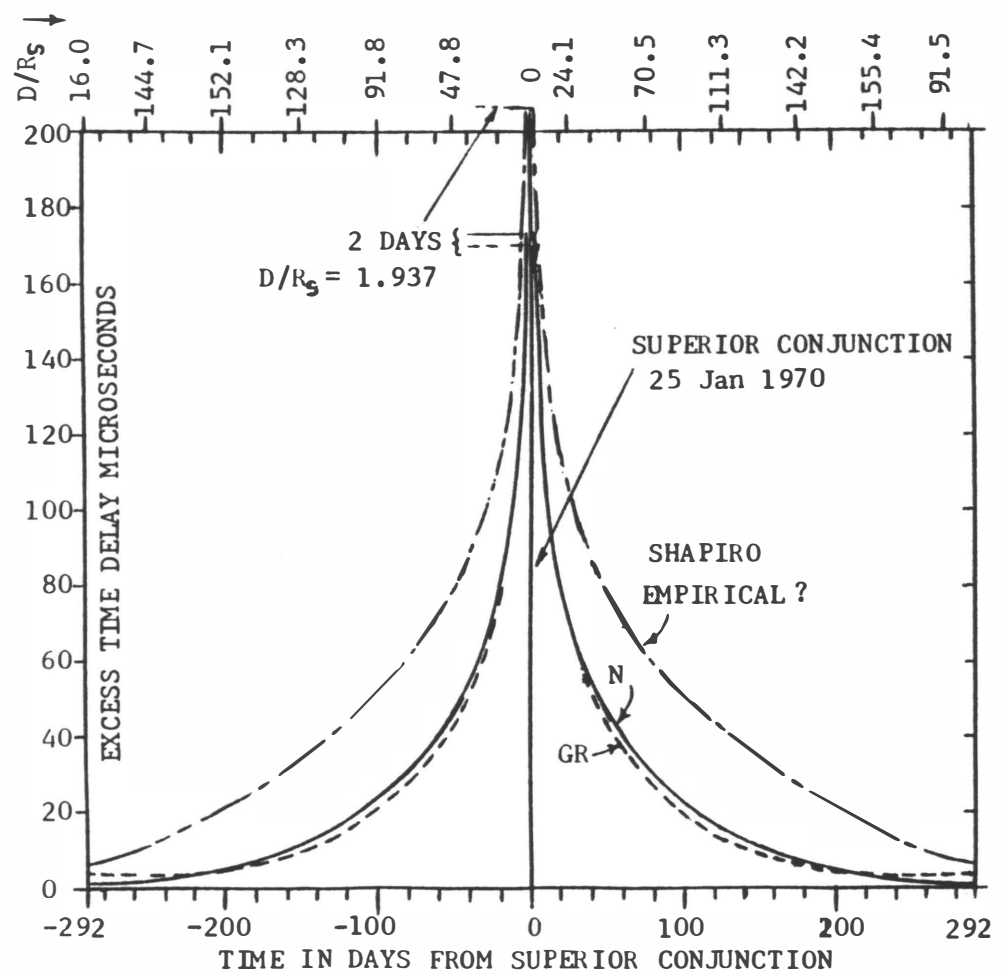

FIG.1 RADAR REFLECTIONS FROM VENUS TO EARTH

reflection from a planet, such as Venus, the time required for the echo to return will be slightly greater than would otherwise be expected. The author's "Extended Newtonian" prediction backs this up by the close agreement shown by the solid line marked "N". However, after the tests, which used radar beams bounced off the planet, Shapiro(9) quotes an unpublished source which gives the prediction shown by the chain dashed line marked "Shapiro Empirical?" It is this, not the others, which fit the experimental observations! It seemed the chain dashed line must be just an empirical match, which is why it is so marked.

The author, however, found that if the nuether rotated in vortex motion centred on the sun, then a further extra time delay would result. This was due to light being helped by the flow on one path but hindered more on the other, resulting in a small net extra "vortex delay." The vortex need to obey the relation $v_f = v_E \sqrt{R_E}$ beyond Earth orbit, $v_r = v_E R_E$ just inside that of Venus and then to the sun, $v = 119 - 33 \log_e(r/R_s)$ km/s.

Added to the curve N, a fair match with the chain curve of FIG.4 is produced. (The tangential velocity of the nuether is v and r is the distance from the Sun, with suffix E for "Earth".)

Such vortex can bring into line the apparent inconsistency of two early observations, the Michelson Morley null interferometer result and the stellar aberration observed by the astronomer Bradley. The former indicated that the Earth had Zero speed whilst the latter showed it moved at 30 km/s: its orbital speed about the Sun. It seemed that at last the long standing puzzle which led to the development of relativity theory had been resolved. The Earth would have no velocity relative to a fluid moving along with it but would be in orbital motion about the Sun relative to any star. A fluid background medium is permitted!

A brilliant mathematician and ardent relativist, John Day M.Sc., has

however for several years been corresponding with this author as a critic, mostly attempting to make a convert to relativity theory. He has proved a most valued critic, helping sometimes with clever maths to enhance the very theory he was criticising. On Christmas Eve 1996, a letter arrived showing he had derived the "empirical" curve from a fundamental equation of General Relativity called a "Metric". So this was, after all, not an empirical fit! But the same metric had also given rise to the lower curve GR: so giving two solutions. Was this reasonable? The answer has to be, "Yes". For example, water can flow in two ways towards a drain hole.

It can have pure radial flow toward the hole or a vortex can develop.

It seems very likely that the chain dashed curve represents a vortex solution from Einstein's mathematics which somehow is far more accurate than that available from the Extended Newtonian approach.

Finally John Day showed he could obtain almost the identical metric from the Extended Newtonian basis. This seems a major advance. It indicates that the same mathematics is applicable to both theories despite the incompatibility of their initial assumptions! It means the mathematics of relativity can be retained to advantage and yet the incompatibility with any background medium, and therefore with quantum theory, is removed. An objection raised by John is worth a mention. He said that comets can have retrograde orbits: so disposing of the vortex theory. It does nothing of the sort. Planets are not locked to the nuether: both have their independent motions but, constrained by the same physical laws, their speeds seem to coincide. A spaceship in retrograde orbit would simply have a high speed relative to the nuether and if it carried a Michelson-Morley type interferometer large fringe shifts would be observed. This hints at the need of a new experiment! Another objection he raised is that such a vortex would required an impossible cylindrical

symmetry. This objection is also readily countered. The problem is that centripetal accelerations will require radial pressure gradients so that the axial ones will also develop when vortex speeds reduce with distance from the central plane. Such three dimensional vortices are known, however. It means that, away from this central plane, the ecliptic i.e. the orbit of the Earth, axial flows will develop together with axial accelerations which adjust to counter the induced axial pressure differentials involved.

Only for the prediction of gravitational wave generation does a possible discrepancy arise. A pair of Neutron stars orbiting each other very fast and, as described by Will(10), their orbital period is decreasing at a rate of 76 microseconds per year. This is consistent with an energy loss by gravitational wave generation as predicted by General Relativity. The Extended Newtonian will, give the same prediction if gravity propagates at the speed of light. This was Einstein's assumption base on the impossibility of even a message travelling faster than light. This limitation does not apply for the new assumptions and it seems likely that gravity waves could propagate even thousands of times faster. Then no gravity waves could possibly be measured.

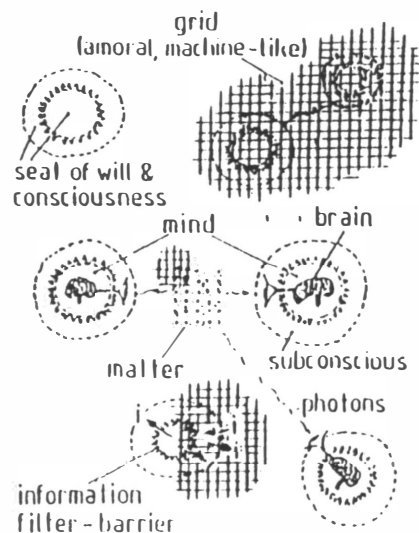

It seems that a paradox free grand unification can now be offered and a new text book (15) detailing this should be available in 1998. It demands that the primary consciousness be in the invisible, a function of the highly structured nuether. To produce matter in the manner described demands a deliberate creative act could only have occurred if the nuether evolved a driving will after it first developed a machine like intelligence.

MIND AND BRAIN.

Clearly a picture has been presented which conflicts with the paradigm of established physics, which demands mind being mere brain function. The background intelligence must have needed a reason for creating a universe of matter and possibly

others interpenetrating, yet invisible: tuned to different quantum wave frequencies. That reason is not hard to deduce: "supermind" needed a set of meaningful environments for its development and interest. It also had to satisfy a creative urge!

It therefore split itself into myriads of sub-minds by programming information filter-barriers around each and created biological machines for them to operate. The brain of matter needed to be built as an interface so that mind could control organs of the body. In this way sub-minds would only be able to interactive sense organs, built from matter, because they would be cut off from direct communication. Worlds of matter would then appear as the only reality, so deceiving our scientist into the belief that this life is all that is. The diagram below illustrates the concept just described. Each sub-mind is shown split into a conscious and sub-conscious part so that only the former can interact with the brain. The latter will remain in contact with all other minds by its connection through the background structure. Most of this is likely to be programmable and machine like: only relatively minute regions will have developed to the conscious

THE GRID, MIND, BRAIN & MATTER

state so permitting the remainder to be programmed as a machine. Further development has shown that most so-called "paranormal"

phenomena can now be explained. They have the potential to be real effects: not the illusions most scientists fall back upon to explain them away! For example, out of body experiences must mean that the sub-mind goes temporarily out of register with the brain. Telepathy can arise by permitting controlled leaks to arise in the information filter-barriers of two people.

Psycho-kenesis no longer poses a threat to the fundamental basis of physics. Normally incarnate minds are inhibited from direct control of matter but matter is structured and maintained entirely by supermind. Some people are able, weakly, to override the inhibition override. These and other phenomena are treated in detail by the author(12) and in summary in the booklet(13). We are, after-all, immortal beings who exist for a definite purpose!

CONCLUSION.

A grand unification of the four forces and particles of nature has been summarised which, as a spin off, demanded mankind to be spiritually based. The author appreciates that the scenario portrayed may seem indigestible to readers used to thing of minds as mere brain function. The advantages gained from rejecting this "when you're dead you're dead" concept seem, however, to be overwhelming. These are therefore listed below as a fitting conclusion:-

1. Reduces the plethora of "elementary particles" such as fermions, quarks, photons and neutrinos, together with virtual "mediators" like "gravitons" to just two, the primaries, which also generate all nature's forces.

2. Solves the vexed question of a huge and totally false "cosmological constant". In the standard "Big Bang" model of creation both space and matter appear together by an "inflation" caused by a combination of an "intrinsic negative pressure of the vacuum" and relativity theory. Unfortunately theorists cannot turn it off so it remains to push the galaxies apart with accelerations 10^{50} times too great. An article from

Cambridge by Abbott(11), published in the prestigious journal, "Nature", highlights their dilemma, writing, "on the negative side the approach relies on a shaky formalism and many untested assumptions." The statement is also made that the theory is part of the Hawking-Coleman programme: showing it to be fully approved.

The new creation mechanism of breeding primaries eliminates the difficulty entirely. Matter could be programmed in the manner of replicating computer viruses. The replication routine, if arranged to cut off at some some specified number of generations, would produce an inflationary big bang. Alternatively, matter could be replicating everywhere to yield continuous expansion, similar to Hoyle's ideas.

3. Wave-particle duality is provided with plausible interpretation which arises spontaneously as a result of the mathematical logic.

A mechanism generates the waves.

4. A "Grand Unified Theory" emerges which is virtually paradox-free. Gravitation is integrated with Quantum theory and gives the right predictions.

5. The difficulties arising from paranormal experiences are resolved by extending physics to bring them within its orbit. The author's book (12) and (13) provide details of the way these problems are resolved, predicting them to have the potential of being real effects.

6. It provides a framework which can support the main tenets of religious belief, so offering the possibility of integration with physics to mutual advantage.

7. Evolution and creationist scenarios become integrated and no longer appear at variance with each other. The matter-system was deliberately created to allow biological life-forms to evolve.

8. Would people who know they have a soul to nurture dare to commit

crime? This is a final question physicists might well consider: false paradigms could be blocking the way to spiritual awareness.

An EXPERIMENT of Michelson-Morley type needs to be mounted in a fast moving space rocket. If the extended Newtonian theory is correct, then fringes shifts should appear consistent with its speed relative to the neuther. What a British triumph it would be if the amateur group called "Aspire" flew this in their next series. They aim for a speed of 5,000 mph. and this would give adequate resolution. A more satisfactory trial would use one of the British "Skylark" rockets which regularly carry experiments into space on sub-orbital flights. The cost is about £10,000 per experiment.

APPENDIX - THE BIG BANG?

The only publications in scientific journals, achieved in thirteen years of sustained effort, have so far been limited to three articles in Russian conference proceedings. Since no assessor has ever found a flaw in the logic this state of affairs raises puzzling questions. The approach cannot be so outrageous because it is already being used as reference texts. Two books published in 1996, relied heavily on this author's books (12) and (13). These are the books by Alan Watts (16) (who coined the name "nuether") and the one by Connelly (17). I was permitted a 25 minute presentation at the 20th International Conference of the Society for Psychical Research on 1st September 1996 and was accorded an enthusiastic response from members. But even their body refuses to publish any of the subject matter in their journal, despite the relevance and despite the lack of any satisfactory alternative so far gracing their pages.

It is as if the Establishment physicists, who insist that mind is mere brain function, has taken charge to protect their own corner. I also found, to my great surprise, that a physicist, Dr. Bernard Carr, had organised the conference and he

supplied information to explain my failure in communication. He said I was well known in cosmology circles: as a MAVERICK!

I thought I was helping!

Let us explore examples of reasoning to find out what is wrong. It seems best to begin at the point which first triggered an interest in the subject: an article written by Professor Tyron which appeared in the New Scientist on March 8th 1984. It's title was "What made the World?"

This suggested that gravitational potential energy was negative and so could balance the positive-mass energy of the universe. Then the whole could have arisen "EX-Nihlo". Yet this potential energy was measured from infinity merely because this was the convention. Clearly creation was a special case which did not admit of such a choice and mass energy would still exist, at infinity, where the potential energy was zero. Effectively the constant of integration had been ignored: the only place where no work against gravity had been done was at the point of creation. Then this potential energy appeared positive: it could not be negative at all. After several journals alerted had rejected this critique without reason, a correspondence with the writer and physicist, Paul Davies, was initiated. He was clearly impressed by the argument and supplied further information about the Big Bang devised by Alan Guth. Suddenly Davies refused to even speak on the telephone, appearing to be totally embarrassed.

However, this information combined with a fuller treatment by Novikov(18), concerning the way an "intrinsic negative pressure of the vacuum" is still being used to power the "Big Bang", will now being studied.

The energy density of Space ϵ had to be huge to explain nature's forces but, at the same time, it had to be zero, it goes, otherwise space could not expand.

This was because an energy input $\epsilon\Delta V$ is needed to increase its volume by amount ΔV .

Somehow this energy requirement needed cancellation by another process. The only other process available was energy derived from the effect of pressure.

Hence $\epsilon\Delta V$ needs to be balanced by the mechanical work done by vacuum pressure p : which is:

$P*(Area*distance) = P\Delta V$. So:

$$\epsilon\Delta V + P\Delta V = 0: \text{ So } P = -\epsilon \quad [1]$$

An equation for density from General Relativity is:

$$\rho c^2 = \epsilon + 3P: \text{ Using [1]: } \rho = -2\frac{\epsilon}{c^2} \quad [2]$$

But a force is needed to power the Big Bang and General Relativity says things fall without a force: so substitute in Newton's Equation (left hand side ((LHS) below) which does specify a force F :

$$F = \frac{-G\rho Vm}{R^2}: \text{ So: } F = \frac{2G\epsilon Vm}{c^2 R^2} \quad [3]$$

V is the volume of a sphere of space of density having the radius R . On its surface, the mass M is situated to feel force F . G is the gravitational constant. The negative signs cancel so that positive sign force appears: just right to give the explosion for powering the creative Big Bang. There are no mis takes in the algebra and this is the basis of the Big Bang accepted for decades, so we are justified in accepting the end result, are we not? Take a more critical look. First the pressure has no conceivable mechanism for its production.

If the particles responsible for ϵ travelled at speeds between zero and that of light then, by adapting the kinetic theory gases, it is readily shown that

$$P = 0 \text{ to } \epsilon/3; \text{ not } -\epsilon!$$

Next it is impossible for any pressure to switch a density from positive to negative as [2] demands. This result means the LHS equations, being used outside its range of its applicability.

Finally it breaks the rules of logic to substitute from [2] to [3] since General Relativity and Newton's equation stem from incompatible assumptions. It is not therefore surprising that mathematicians have been stuck so long with their problem of a huge predicted "Cosmological constant" which is entirely false. This problem vanishes as soon as the idea of primaries existing in both positive and negative energy states is accepted because no violent explosion is then postulated to create the universe. Instead a gentle sustained creation of the nuether is predicted. This brings us to consider another difficulty.

The brilliant physicist Sir Fred Hoyle, who worked out intricate aspects of nuclear fusion in the Sun, also proposed his idea of continuous creation. Interstellar gas was continuously being formed by some unknown means and was pushing the galaxies apart. The universe had neither a beginning nor an end and already a state of continuous expansion existed to infinite distance in all directions. New galaxies were continually condensing from the interstellar gas, due to gravitational attraction, so that the universes would always appear the same at all times. This was a rival to the Big Bang until astronomical observations ruled it out. It could have been eliminated earlier by the application of conceptual logic. A hollow sphere of gas is imagined in which the inner and outer radii are always kept in constant ratio with one another as it steadily grows. Clearly it cannot move at a constant radial speed: it must be continually accelerating.

Hence expansion in a steady state is impossible! Instead the galaxies are now predicted to be receding at speeds proportional to their distance from us: so matching the observations initiated by Hubble, just as well as the Big bang. This is treated fully in the new book(15) in which the nuether is considered: not the interstellar gas of Hoyle. This shows that, not only is every hollow spherical shell element in a state of accelerating expansion: the density is always increasing at every point until a limiting condition is reached. This limiting condition and annihilation are in exact balance. Unfortunately there can be no filamentous structure here and so neither mind nor matter could exist there. It is the "Black Hole" condition: quite unlike any black hole described by General Relativity. Consequently the universe cannot be infinite but must exist as a huge ever growing sphere. It had a beginning but may never end. I believe I found the reason for the present state of Cosmology-physics on return from the Russian Scientific Conference. On the 31st of October 1991 I presented the mathematics of the Quantum Gravity theory to the students Physics Society of Cambridge University. They were most enthusiastic and one said this was something they could really understand: it made sense. There was general agreement on this point. I asked if this meant they found their courses difficult to comprehend. The response was universal: none of it made sense, they said, the mathematics came so thick and fast they just had to accept it without having time to absorb or criticise the material. If real progress is to be ensured in physics, then the mathematicians need to be encouraged the cross-fertilisation between disciplines. Nobody can learn everything and if people train predominantly in mathematics they need engineers, like me who have learned basic principles at the additional level of "conceptual logic". In mathematics the physicists are brilliant, but at least we could stop them tripping over simple things! *There is another serious consideration. It cannot be long*

before funding bodies become aware of the situation. They could decide public funding is not being used in an effective way!

PARANORMAL INVESTIGATIONS
ABOUT THE UFO CRASH
ON INDEPENDENCE DAY 1947

ROSWELL BOOK LIST

POPULAR PAPERBACKS

- The ROSWELL INCIDENT by Charles Berlitz & William Moore. 1980. First book. Index.Illus. 190 pages. £4.50
The TRUTH ABOUT THE UFO CRASH AT ROSWELL by Kevin Randle & Donald Schmitt. 1994. Follows on from UFO CRASH AT ROSWELL by the same authors. Useful update. Index. 16 plates. 320 pages. £6.00
UFO CRASH AT ROSWELL by Randle & Schmitt. 1991. Inc.witness index. Index. 16 plates. 330 pages. £5.50
MAJESTIC by Whitley Strieber. 1989. Fictionalised story of Roswell crash. Afterword comment. 310 pages. £6.00

LARGER SOFTCOVER BOOKS

- CRASH AT CORONA by Don Berliner & Stanton Friedman. 1997 edn. New Mexico sites. Illus. 240 pages. £11.75
The ROSWELL MESSAGE by Rene Coudris. 1997. 1947 crash; Santilli film saga; Channelled messages by Austrian psychic on reasons for alien visits; conspiracies, warnings against cloning. Index. Illus. 224 pages. £14.00
ROSWELL UFO CRASH UPDATE by Kevin Randle. 1995. Interviews. Mogul debunked. illus. 190 pages. £12.50

HARDBACK BOOKS

- BEYOND ROSWELL by Michael Hesemann & Philip Mantle. Forward by Jesse Marcel. A detailed history of the Alien Autopsy Film. Chronology. Also AREA 51 and Coverup. Index. 32 colour plates. 308 pages. £18.50
The DAY AFTER ROSWELL by Col. Philip Corso with Wm. Birnes. 1997. Retired NSC member and Head of US Army's R&D Dept. reveals Govt's. role in crash artifacts. Astonishing claims. 8 plates. 345 pages. £18.50
The ROSWELL FILE by Tim Shawcross. 1997. Saga with witness testimonies. Index. 8 plates. 250 pages. £17.95

VIDEO: UFO DOWN IN ROSWELL by Paul Davies (1997) Witnesses, researchers, GAO. 54 minutes. £13.50

MAGAZINE: NEXUS Aug-Sept. '97. Article on Roswell crash debris analysis. Conspiracies, health. 88 pages. £2.90

50 YEARS OF UFOs BOOK LIST

- COMPLETE BOOK OF UFOs by Jenny Randles/P. Hough. Rev. 1997. "50 Years of Contacts." Index. 396 pages. £7.75

HARDBACK BOOKS

- ALIEN CONTACT-The First 50 YEARS by Jenny Randles. 1997. Year by year case files. Illus. 144 pages. £16.45
FIFTY YEARS OF UFOS by John & Anne Spencer. 1997. By decades. Well illus. inc. col. Index. A4x192 pages. £21.00
UFOs 1947-1997 ed. Hilary Evans/Dennis Stacy. 1997. Solid guide, several authors. Index. W. Illus. 272 pages. £18.00

Some RECENT ADDITIONS TO STOCK (HARDBACKS)

- ALIEN AGENDA by Jim Marrs. 1997. Purpose of ETs. among us & the future. Index. 8 plates. 460 pages. £18.95
BORDERLANDS ed. by Mike Dash of Fortean Times. Full range of baffling phenomena. Index. 352 pages. £18.50
COSMIC VOYAGE by Courtney Brown. 1997. Scientific remote viewing of two lots of aliens! 324 pages. £18.50
GODS OF THE NEW MILLENNIUM by Alan Alford. 1997. Man created by real Gods. Col. illus. 484 pages. £19.00
LIFE ON MARS? by Fred Hoyle/Chandra Wickramasinghe. 1997. Life from comets. 8 plates. 232 pages. £18.50
SUPERGODS by Maurice Cotterell. 1997. Mexican Mayan mysteries and future predictions. 240 pages. £18.50
TEMPLAR REVELATION by Lynn Picknett. 1997. Secret guardians of identity of Christ. Illus. 450 pages. £19.00
The UNINVITED by Nick Pope. 1997. Thorough review & positive line on abduction cases. Index 325 pages. £16.00

ALL PRICES INCLUDE POSTAGE AND PACKING: Please send payment with your order. Cheques and British Postal Orders should be made payable to: **Lionel Beer.** (USA dollar checks are only acceptable if made payable to "CHUCK PRESTON CO.") USA dollar bills are welcome, but check mid-rate and add one dollar for handling. International recorded delivery is an optional extra at £2.50 and may speed delivery. Customers outside the UK are asked to add 10% to these prices to cover higher postal costs. European Postal Money Orders can be a rip-off, but EUROCHEQUES are welcome!
